

Automated Shades

CONSERVE | PROTECT | SAVE

Preserve time, energy, and
technology in a single touch.

CONSERVATION & PROTECTION IN ONE TOUCH

Seamlessly integrating a shading solution typically involves simple up, down, and stop functionality, however, our team of technology specialists can provide an automated shading solution, unlike our competitors. Immedia can develop a diverse, fully customizable shading experience in which scheduled settings or saved 'scenes' can be utilized to accommodate specific business needs. We can provide a variety of shade types including but not limited to horizontal sheers, roller shades, roman shades or even a drapery system. Imagine hitting a single button to activate a projector in a conference room while automated shades simultaneously lower to create the ideal atmosphere for a presentation or meeting.

SOME OF THE MANY ADVANTAGES

Conserve Energy:

Control the amount of sunlight that enters a room at any given time of the day.

Security/Privacy:

Control your shades from anywhere at anytime to deter potential intruders or prevent others from viewing inside the space. This could include adding shades to an interior wall to create privacy in conference rooms.

Protection:

Block harmful UV rays from damaging interior flooring or furniture, and control reflections or glares on displays or computer monitors.

One-Touch Solutions:

Control the amount of sunlight that enters a room at any given time of the day.
