

Tank Odour Control & Accessories

Introduction

The natural consequence of holding waste in a tank - until such time as it can be emptied by a registered contractor - is that you may occasionally need to take measures to counteract unpleasant smells. There are both physical and chemical solutions to odour control, all available when you buy your tank, or as retrofit items at a later stage.

At Plastic Solutions, we have you covered.

Waste Tank Odour Trap & Breather Kit

Eliminate bad odours with our robust **Waste Tank Odour Trap & Breather Kit**. Designed specifically for outdoor drainage applications, this is a robust two-way filter, vent and air admittance valve combined with **2 x tank seals**.

Waste Tank Cleaner - Recirc HD2 Clear

Fight unpleasant odours and kill bacteria with **Recirc HD2 Clear**, an all-round sanitiser and maintenance product. Ideal for large plastic effluent tanks, this acts to remove residues and cleanse tanks internally.

Cumberland Blue - Toilet Tank Additive

Particularly suited to long periods between servicing, **Cumberland Blue** is a highly-perfumed, heavy duty, liquid additive.

This formaldehyde-free product has the consistency of a syrup, contains a non-staining blue dye and is available in various fragrances.

Level Alarm - Waste Monitoring System

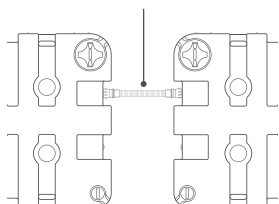

Controlling smells is one challenge: knowing when your tank is nearly full is another.

Use the **High Level Alarm** to receive warnings when your tank is nearly full, so that you can book a tank empty at the right time. Avoid expensive emergency callouts.

ACCESSORIES

Tank Linking Kits

Create the exact waste volume you need.

Elsan® Tipping Point

Control how chemiloo waste is tipped into your tank.

Yellow Column Caps

Help avoid inadvertent spills.
