

## Tank Odour Control & Accessories

### Introduction

The natural consequence of holding waste in a tank - until such time as it can be emptied by a registered contractor - is that you may occasionally need to take measures to counteract unpleasant smells. There are both physical and chemical solutions to odour control, all available when you buy your tank, or as retrofit items at a later stage.

**At Plastic Solutions, we have you covered.**

### Waste Tank Odour Trap & Breather Kit

Eliminate bad odours with our robust **Waste Tank Odour Trap & Breather Kit**. Designed specifically for outdoor drainage applications, this is a robust two-way filter, vent and air admittance valve combined with **1 x tank adaptor**.

### Waste Tank Cleaner - Recirc HD2 Clear

Fight unpleasant odours and kill bacteria with **Recirc HD2 Clear**, an all-round sanitiser and maintenance product. Ideal for large plastic effluent tanks, it acts to remove residues and cleanses tanks internally.

### Cumberland Blue - Toilet Tank Additive

Particularly suited to long periods between servicing, **Cumberland Blue** is a highly-perfumed, heavy duty, liquid additive.

This formaldehyde-free product has the consistency of a syrup, contains a non-staining blue dye and is available in a pleasing berry fragrance.

### Level Alarm - Waste Monitoring System

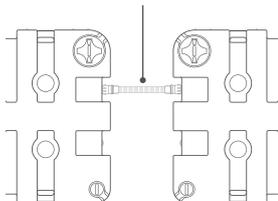

Controlling smells is one challenge: knowing when your tank is nearly full is another. Stay in control.

Use the **High Level Alarm** to receive warnings when your tank is nearly full, so that you can book a tank empty at the right time. Avoid those expensive emergency callouts.

## ACCESSORIES

### Tank Linking Kits

Create the exact waste volume you need.

### Elsan® Tipping Point

Control how chemiloo waste is tipped into your tank.

### WC-Connector Kit

Easily connect toilet waste pipe to tank.
