

Reduce Readmissions and Improve Member Outcomes

Movn Virtual Cardiac Rehab

Moving Analytics is a telehealth provider of virtual cardiovascular risk reduction programs. Our flagship product, Movn Virtual Cardiac Rehab is the most widely deployed and clinically validated virtual cardiac rehab program in the market.

Movn is an end-to-end, integrated solution, managing patient care from referral and onboarding through delivery of care. Movn leverages evidence-based guidelines, behavioral science, remote monitoring, and personalized coaching to support patients with managing multiple risk factors including: (1) increasing exercise, (2) eating healthier, (3) managing stress, (4) quitting smoking, and (5) blood pressure control and (6) cholesterol management.

MOVN virtual cardiac rehab helps members recover after a cardiac event such as an MI, CABG, PCIs/Stent, or stable heart failure. Health plans that have implemented the Movn program have achieved a 63% or higher CR participation rate, 80% graduation rate and have seen improvements across 10 HEDIS measures.

Extensive Evidence Base & Proven Outcomes

Movn has the most published clinical evidence of any virtual CR solution on the market today and is based on over 20+ years of research and clinical deployment on over 70,000 patients. Movn is based on an exclusive license to MULTIFIT - an evidence-based virtual cardiac rehab program developed at Stanford Medicine and validated over five randomized clinical trials. Movn helps health plans improve over 10 NCQA and HEDIS measures including cardiac rehabilitation (CRE), readmission reduction, medication adherence, hypertension control and member quality of life.

Why Work With Us

We are the leader in virtual cardiovascular risk reduction programs. You will receive the benefits of an extremely well-validated, proven cardiac rehab solution that gives 3x times higher participation and an ROI of 5.2x.

Deep Experience

Moving Analytics has over 25,000 rehab-eligible members under contract with leading health plans including HCSC, Highmark, Kaiser & Optum. Our clinical leadership team consists of the foremost thought leaders in cardiovascular care with more than 150 peer-reviewed publications.

Transparent Analytics

Through our population level analytics tools, we provide transparency about the cardiac rehab patterns and outcomes of your members to help improve HEDIS and STAR ratings.

Partnership Model

We contract with health plans as an in-network provider to deliver virtual cardiac rehab to their members in coordination with the hospitals and cardiologists in their network. Our provider model makes it easier for you to plug us in to your existing provider networks and make immediate impact in your cardiac rehab participation rates across your membership with one cost-effective partner. This approach will save you time and money.

At-Risk Pricing

We keep things simple - Movn is priced as a function of member engagement, clinical outcomes and cost savings. No upfront or admin fees involved. We are willing to go at risk with you and share in our joint success.
