

# Rate3

## A DECENTRALISED DUAL PROTOCOL FOR CROSS-CHAIN ASSET TOKENIZATION AND IDENTITY MANAGEMENT

### Bridging the Gap between Enterprises and Blockchains

#### PROBLEM 1

No common legal frameworks

#### PROBLEM 2

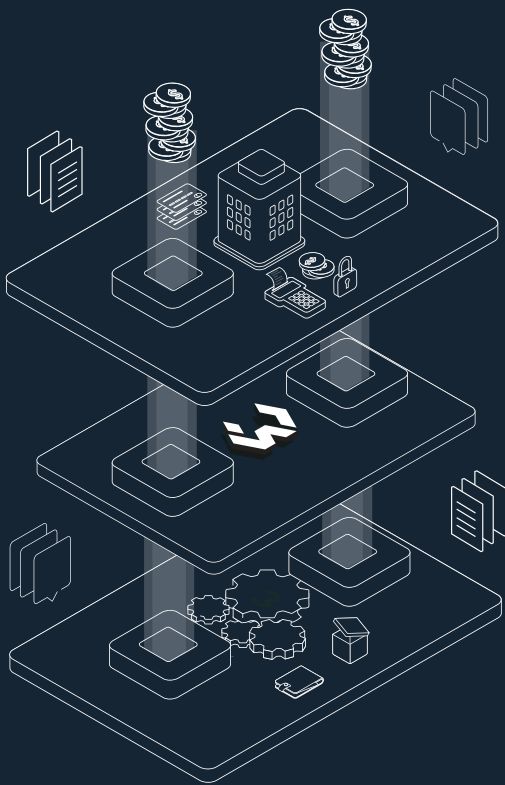

Differing smart contract standards

#### PROBLEM 3

Fragmented identity ecosystem

Rate3 provides a common legal framework, smart contract standard and identity ecosystem to bridge the gap between enterprises and blockchains

### PROTOCOL #1 TOKENIZATION

An end-to-end protocol for tokenization on Ethereum and Stel-

- ✓ Guarantees legally-recognized ownership rights through trusts
- 📄 Specifies how smart contracts direct trustees to manage assets
- 🚩 Collateralise underlying assets through staking

### PROTOCOL #2 CROSS-CHAIN IDENTITY

A protocol to create and manage a unified cross-chain

- 🔑 Streamline KYC/AML processes through a reusable identity
- 👤 Manage the same identity across multiple blockchains
- 🔒 Secure storage of identity data
