

-FOR IMMEDIATE RELEASE-
Minimally-Invasive VASER® Liposuction
Now Available At SRMC Plastic Surgery

(SALEM, OHIO) – September 23, 2021 – Struggling to lose areas of stubborn fat that won't respond to diet and exercise? SRMC Plastic Surgery now offers minimally-invasive liposuction as a body contouring technique that slims and tones targeted areas by removing unwanted fat.

Board-Certified Plastic and Reconstructive Surgeon Linda Camp, M.D., FACS, performs the innovative VASER® liposuction at SRMC Plastic Surgery as a cosmetic procedure, with less recovery time than traditional liposuction.

SRMC Plastic Surgery is an affiliated practice of Salem Regional Medical Center.

VASER liposuction can be used to remove excess fat from various parts of the body, including the abdomen, chest, waist, back, hips, thighs and buttocks. It is also gentle enough to treat more delicate areas, such as the arms, neck and chin.

“The VASER technique uses advanced ultrasound technology to break down unwanted fat deposits, so they can be more easily removed through a gentle suction process,” Dr. Camp explained. “Unlike conventional liposuction, VASER precisely targets fat cells without damaging the surrounding healthy tissues, resulting in less pain, a faster recovery and smoother body shape.”

In addition to its cosmetic benefits, VASER liposuction can also be used as an option for obtaining fat from one area of the body, such as the abdomen, thighs or buttocks; and using it to reconstruct the breast following surgery for the treatment of breast cancer.

“Because the VASER uses a gentle fat removal technique, the extracted fat is higher quality and re-injects more easily and smoothly into the breast area than fat harvested using traditional liposuction,” Dr. Camp said.

Benefits of VASER Liposuction:

- Easier and more precise removal of fat deposits
- Smoother body contouring than a traditional liposuction procedure
- Faster recovery time
- Less swelling, pain and bruising after surgery

- Minimal blood loss

Dr. Camp noted that VASER liposuction is not a treatment for obesity.

“Liposuction is very successful at reducing localized areas of fat and improving the body’s contours, but it is not an overall weight loss method or alternative to a healthy diet and exercise.”
