

Melbourne Water major project delivery

Client Melbourne Water
Date 2016-current

Description

Since 2016, Comacon consultants have been integrated within the Melbourne Water community engagement team providing advice and expertise for Major Project Delivery. We bring a high-level of knowledge gained from our work in the public and private sectors and our project work with Melbourne Water and other clients.

In 2018, we were among three companies selected through a newly formed panel process to continue providing engagement and communication services to Melbourne Water.

Our consultants continue to work on a variety of Melbourne Water projects for diverse groups of stakeholders and communities. Here are just a few:

- Brighton main sewer upgrade
- Browns Reserve drainage pump station
- Brushy Creek Wetland upgrade
- Dandenong Creek levee upgrade
- Eastern Treatment Plant (ETP) renewable energy project
- Greenvale Reservoir embankment upgrade
- Holden Reservoir inlet pipeline

Approach

Our roles as Senior Advisors include:

- assistance with project planning and the early stages of project design
- developing and implementing stakeholder and engagement strategies
- on the ground communication and engagement during delivery
- managing construction contractor communication and engagement personnel

Being integrated with the Melbourne Water team means early engagement that builds strong relationships with key internal and external stakeholders and influencers; collaboration with stakeholders to understand their concerns and adjust our engagement techniques; strategies tailored to each project and stakeholder group. This multi-channel approach ensures all stakeholders have the opportunity to be informed and make informed decisions about the projects, their impacts and most importantly the project benefits.
