

Liverpool Road Retarding Basin Upgrade

Client John Holland Group KBR Joint Venture
Date 2016

Description

Embankment works were carried out to enhance the basin's structural capacity to ensure the retarding basin continues to operate safely during floods and to meet ANCOLD guidelines. The Joint Venture (JV) delivered an upgraded retarding basin for the people and community living in the City of Knox Council catchment area. Comacon provided stakeholder/ community relations and communications management.

Approach

Our consultant worked as Communications and Engagement Lead, during the design and construction phases of the project within the overall program of works managing community and stakeholder engagement through extensive consultation with local neighbours and community groups.

Highlights

Our consultant built strong relationships with local residents early on in the project through extensive consultation to ensure issue resolution was quick and thorough.

Contacts
