

Greater Sydney Bridges Upgrade

Client WaterNSW
Date 2019 - 2021
Value \$8.7 million

Description

WaterNSW is currently upgrading and restoring sixteen heritage bridges as part of the ongoing maintenance and safety program. The bridges range geographically from Robertson in the South, to Warragamba in the North, and are a mixture of steel girder, concrete arch and timber deck bridges.

The project has a total value of \$8.7 million, commenced in February 2019 and is anticipated to reach practical completion through to February 2021. During Stage 1 of the program, various bridges located along the Upper Canal and at dam sites including:

- Prospect Reservoir
- Woronora Dam
- Cordeaux Dam
- Avon Dam
- Warragamba Dam
- Wingecarribee Reservoir

Approach

Comacon's consultants worked closely with the WaterNSW project team to develop and implement the community engagement plan ensuring the picnic grounds at Prospect Reservoir, which are owned and managed by Sydney Water, remained open to the public during the works. Although closure of the spillway bridge was necessary due to the removal of lead paint, early engagement with bicycle groups meant that an alternate, safe route was agreed upon.
