

Elevate your safety and efficiency to new heights with **Spider X**

Power-down Innovation

No lithium-ion batteries, no risk. The built-in aviation-safe backup power ensures you get all information off your aircraft.

Easy to Install

Designed specifically with aviators in mind, the simple plug and play device is ready to go. An external antenna option is also available.

Virtual FDR™

Access and download digital flight data from your aircraft, review flight history via reporting dashboards so you can make safer, smarter decisions.

Wireless Connectivity

No SD cards, no hassle. Spider X downloads flight data and updates to the latest firmware wirelessly.

Keypad for Ease of Use

The virtual keypad (via the Spidertracks app) or external keypad (optional extra) allows for easy access to the MARK, WATCH, and SOS buttons.

Control LED Brightness

Increase or decrease via the app and fly distraction-free. Beneficial for NVG operators.

High Resolution Flight Data Monitoring

Included with Virtual FDR™, you can view an incredibly accurate representation of an aircraft's flight path.
