

LED HORIZON PANEL INSTALLATION GUIDE

IMPORTANT: Please take the time to read this quick installation guide relating to the following products: EL28HEPC/N, EL28HPPC/N, EL30HPC/N, EL36HPN/CUGR, EL40HPC/N and EL60H612PC/PN both standard and dimmable LED Ceiling Panels

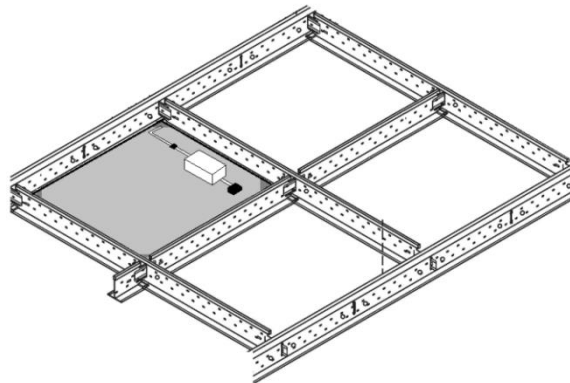

- Always isolate the power before carrying out any work.
- This product is for professional use ONLY.
- All wiring installations must comply with IEE regulation BS7671:2008

In the box:

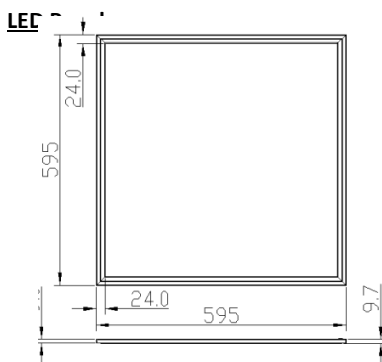

1 x LED Panel 1 x LED Driver

Installation (False Ceilings):

- 1) Isolate the power before starting work.
- 2) Type of installations
 - a. For upgrades of existing installations identify where you wish to locate the ceiling tile within the room and carefully remove the current tile.
 - b. For new Installations it is recommended to fit the LED Panels before the rest of false ceiling is installed to allow easy access and also the chance to easily relocate should you be unhappy with the light distribution.
- 3) Carefully remove the LED Panel from the box and discard all packaging and check for any defect or damages before installing.
- 4) First wire the supplied LED driver to the mains power supply. (For dimmable connect to the relative control wires and for Emergency versions refer to the Emergency product wiring diagram)
- 5) Carefully move the LED panel into the ceiling aperture ensuring there is at least a 100mm gap between LED Panel fittings and connect the LED driver to the Panel.
- 6) Ensure the panel sits securely within the ceiling grid and that the driver is located on top of the panel like the below diagram:

Technical Drawing:

Surface mounting trays: Are available separately (Part Number: SPPSMK) to allow fitting to a solid flat wall or ceiling.

Suspension kits: All the LED panels are compatible with ceiling suspension kits. Suspension cable can be easily connected to the four corners of the panels

Warranty and Specification: For full specification, extended warranty applications and warranty terms and conditions visit www.novah.co.uk
