

New Programs Implemented at New Orleans Adventist Academy

God has really blessed our little school in the last two years that I have been here. We have added robotics and choir, as well as a school garden. We've also experienced 14 baptisms.

GARDEN

MAP TESTING

We reviewed our MAP scores and had individual meetings with each student (down to the Kindergartener) to map out our goals and how we can achieve them on our final MAP Assessments. Our students in grades K-4 have scored higher than the national average in all subjects for Fall and Winter and we want them to finish strong. For instance, in science the students scored lower in life cycles of animals and the food chain. What better way to teach them about life cycles than for them to see it live. It's so exciting to experience this with hatching chicken eggs.

STORE

We made a store in our game room where the children use play money to buy real things. They have to count out their money to purchase things. I've heard them say "I have to put that back because I do not have enough money." As a result of the store, they can count money so much better, which was a focus area for them! We try to make learning fun and we enjoy it as much as they do.

Carla Drake is Principal at
[New Orleans Adventist Academy](#)
in New Orleans, LA.
She teaches grades Pre-K to 4.
