DESCRIPTION

Our “TTE” enamel coatings are high performance, single component enamel topcoats designed for interior use on high performance general aviation, business jet, and commercial aircraft. These coatings are excellent exterior coatings on substrates that are not subjected to harsh environments. PT-381 enamel meets, and exceeds TT-E-489J. PT-382 enamel meets and exceeds TT-E-529G & A-A-2962 and PT-383 enamel meets and exceeds TT-E-527D. These high performance coatings can be applied over wood, composite or metal surfaces. These products are available in bulk or aerosol.

COLORS – AVAILABLE IN ALL FEDERAL 595C. CUSTOM COLORS ARE ALSO AVAILABLE.

SHELF LIFE

Shelf life is only applicable for materials stored in unopened and undamaged original factory filled containers. 1 year when stored at 50°-95°F.

MIXING INSTRUCTIONS

Shake component A in a paint shaker for 5 – 10 minutes for optimal results.

Reduce: The preferred is PTI-1022X66, PTI-1003 TYIII. “Industrial Grade Virgin” acetone may be used as a substitute. Avoid acetone that can be purchased in retail paint or home stores.

- If Spraying: Thin 8 parts enamel with 1 part thinner.
- If Brushing: Thin 8 parts enamel with up to, but not more than 1 part thinner.
APPLICATION

This product can be applied by brushing, rolling conventional air spray equipment or HVLP Spray system. Please consult with a PTI representative for specific equipment recommendations and settings.

1. Make sure pots, guns, and lines are purged and cleaned.
2. Mix both base and thinner thoroughly and filter/strain before spray application. 
   NOTE: It is not recommended to strain flat/matte coatings.
4. Always air-blow and tack wipe the surfaces to be painted. Aircraft should be grounded to prevent static.
5. Best application results: apply 2 coats: 1 fog/tack coat & 1 full coats from 0.6 – 1 mil thickness.
6. Do not allow more than 48 hours to pass before applying the second coat.
7. Recommended Dry Film Thickness is 1-2 mils. Some colors may require thicker films to achieve hiding.

NOTE: Application of PTI products requires the use of all OSHA approved safety equipment, including proper ventilation. Additionally, PTI products require the recommended temperature/humidity conditions and film thickness ranges for optimal performance. The material, hangar, and aircraft skin temperatures should be no lower than 75° F / 25° C before, during and after application.

DRYING & CURING SCHEDULE

Dry times are based on the dry film thickness between 1-2 mils (25-50 microns).

Air Dry Times (75°F / 25°C and 50% Relative Humidity)
Dries to touch in 1-2 hours; dries hard in 8-10 hours.

EQUIPMENT CLEANUP

Use clean PT-1022X66 Thinner. Do not allow material to dry or cure inside any equipment.

HEALTH, SAFETY, & STORAGE REQUIREMENTS

Refer to each individual material SDS (Safety Data Sheet) for specific requirements on the health, safety, storage and handling requirements. Follow all local, state, and national regulations during surface preparation, material application and cleanup.

PRODUCT INFORMATION & DISCLAIMER

Product Data Sheets are periodically updated to reflect new information. It is important to use the latest and most recent revision for the product being used. The foregoing information is accurate to the best of our knowledge. However, due to differences in customer handling, use and method of application which are not known and are beyond our control, Products Techniques, Inc. makes no warranties as to the end result.
