DESCRIPTION

PT-332 is a corrosion preventative permanent resin coating that conforms with SAE AMS 3132. PT-332 is intended for use on interior and exterior aircraft engine components and other metal parts. This permanent resin shows excellent resistance to solvents, hot oils (395°F), salt & fresh water, most acids as well as other organic and inorganic chemicals. PT-332 is very durable with good abrasion resistance properties.

COLORS

This coating can be provided in clear or clear with blue or green dye. Custom colors are NOT available.

SHELF LIFE

Shelf life is only applicable for materials stored in unopened and undamaged original factory filled containers. 1 year when stored between 50⁰-85⁰ Fahrenheit.

CLEANING

All parts must be chemically or mechanically cleaned, film free, by an industry recognized cleaning specification or method.

MIXING INSTRUCTIONS

Generally, no thinning is required. If bubbling does occur during application, reduce 4 parts of PT-332 with 1 part PT-1070 solvent. More solvent may be added for special applications but do not exceed a 1:1 by volume ratio.

APPLICATION

This product can be applied using brush, dripping, conventional air spray equipment or HVLP Spray system. Please consult with a PTI representative for specific equipment recommendations and settings.

1. Make sure pots, guns, and lines are purged and cleaned.
2. Mix both base and catalyst thoroughly and filter/strain before spray application. **NOTE:** It is not recommended to strain flat/matte coatings.
4. Always air-blow and tack wipe the surfaces to be painted. Parts should be grounded to prevent static.
5. Best application results: apply 2 coats: 1 fog/tack coat & 1 full coats from 0.75 – 1 mil thickness.
6. Allow 20-30 minutes to pass before applying additional coats.

NOTE: Application of PTI products requires the use of all OSHA approved safety equipment, including proper ventilation. Additionally, PTI products require the recommended temperature/humidity conditions and film thickness ranges for optimal performance. The material, hangar, and aircraft skin temperatures should be no lower than 75°F / 25°C before, during and after application.

**DRIYING & CURING SCHEDULE**

**Air Dry Times** (75°F / 25°C and 50% Relative Humidity)
- 15 minutes for set to touch.
- After air drying PT-332 the parts should be baked

**Bake Cure**
- Bake 25-30 minutes at 320° to 330°F for optimum resistance performance

**EQUIPMENT CLEANUP**
Use clean Acetone, IPA, or PT-1070. Do not allow material to dry or cure inside any equipment.

**HEALTH, SAFETY, & STORAGE REQUIREMENTS**
Refer to each individual material SDS (Safety Data Sheet) for specific requirements on the health, safety, storage and handling requirements. Follow all local, state, and national regulations during surface preparation, material application and cleanup.

**PRODUCT INFORMATION & DISCLAIMER**
Product Data Sheets are periodically updated to reflect new information. It is important to use the latest and most recent revision for the product being used. The foregoing information is accurate to the best of our knowledge. However, due to differences in customer handling, use and method of application which are not known and are beyond our control, Products Techniques, Inc. makes no warranties as to the end result.
