

# Papercurve For Contract Lifecycle Management (CLM)

Papercurve helps companies manage contracts from creation through obligation management to renewal or expiry.

## Contract Template Libraries

Consolidating and simplifying an organization's contract template library can greatly improve contract risk management and accelerate contract turnaround. Robust version control ensures everyone is looking at a single source of the truth.

## Contract Review

Flexible review workflows enable your team to assess content and make comments before submitting it to financial systems for settlement.

## Contract Approval

Effective contract approval begins with providing the necessary context with version history and having a consolidated repository of related files. Users can easily manage the intuitive rules, definitions, and updates, and have transparency into whose approval is needed and when.

## Contract Execution

Papercurve supports digital and manual signature workflows and provides certificates of approval that can be printed or shared outside of the Papercurve workspace.

## Contract Obligation Management

Papercurve has analytics tools that enable insights on key items like warranties, renewals, returns, and discounts. Automated notifications before key events like a contract or warranty expiry/renewal dates are easy to set up and customize.

## Contract Expiry and Renewal

For expiring contracts, your files are archived in case they are needed for an audit. Contracts that are renewing kick off a workflow to make edits and manage approvals for the new contract.
