

1:1 PURÉE RECONSTITUTION INSTRUCTIONS

1. Start with a sanitized Store & Pour and a blender jar.
2. Using the ounce measurements on the side of your blender jar to measure, pour 30 oz of purée into your blender jar. Then, pour the purée from the blender jar into your Store & Pour.
3. Next, fill the blender with 30 oz of water. Then, pour this into the Store & Pour. Ta da! You now have 60oz of reconstituted purée! ***But, you aren't done!***
4. Since you have 16 oz of purée left in your Dr. Smoothie bottle, add 16 oz of water to your blender jar, and pour it into the Dr. Smoothie bottle. Screw on the cap and date the bottle with permanent marker. Then, put the bottle in the back of your fridge. **Now, everything is reconstituted!**
5. Use the reconstituted purée from your Store & Pour first until the Store & Pour is empty. Once your Store & Pour is empty, simply add the extra 32 oz of reconstituted purée from the Dr. Smoothie bottle back into the Store & Pour, and recycle the bottle.

Here's a rundown on the benefits of switching puree reconstitution from a 2:1 to 1:1 ratio. (based on shake/smoothie offerings in our Platinum Package):

- Almost 12% savings in Cost-of-Goods
- Over 20% Drop in Carbs
- Over 10% Drop in Calories
- Almost 25% Drop in Sugars
