

CREWSTRONG™

PROTECT YOUR CREW.

- Don't let COVID-19 cause unnecessary project or job site shutdowns. CrewStrong™ allows you to track the movement and interactions of employees across all job sites in real-time, managing the risk of potential infections being spread.
- If an employee or member of your crew tests positive for COVID-19, easily track their movement history and view every employee that came in contact with that individual in any selected time period. Make accurate and timely decisions at an individual or group level.
- With its patented mobile-geofence technology, CrewStrong™ is able to monitor “pass-through” ranges, configured to your organization’s needs.
- Within the map view of the Fleet Intelligence™ platform, see live employee locations as they are actively within the job site, building, or designed areas.
- When an employee has left the designed work-zone, the signal will drop – no longer tracking during non-work-related activities.
