Installation

Handrail System: Lay out the handrail system on the wall marking the location of handrail standoffs. Attach the standoffs to the wall. Cut aluminum to desired length, attach returns or corners to the aluminum, attach aluminum to the standoffs, then cut vinyl cover, accent strip, and impact absorbers to desired length and snap onto the aluminum. Cut the wood hand grip as required, taking into consideration all inside corner miter cuts, install hand grip on the aluminum retainer. When a splice occurs, splice the aluminum retainer, wood handgrip, vinyl accent strip and the vinyl cover at different locations along the run. The use of back-up channels at stud wall conditions is recommended. For more detailed installation instructions, refer to the Wallprotex installation guide for this product.
