Building Description	
Building address	
This form completed by	
Company doing pre-job evaluation	
Date of pre-job evaluation	

Describe the existing roof assembly from the top down

	Area 1	Area 2 (if different)
Exposed surface material		
Insulation or cover board		
Prior membrane or surfacing		
Insulation or cover board		
Roof Deck material		

How old is the existing roof?	
What is the estimated roof slope?	

Condition	Check if Yes	Check if No
Existing Leaks?		
If Yes, identify on roof map. Include interior and exterior pictures or video		
Damaged Substrate?		
Describe Type of damage and how it will be repaired?		
Ponding water?		
If yes, indicate on roof map and tell how drainage will be corrected.		
Previous repairs to membrane?		
If yes, indicate on roof map. If repairs were made improperly describe how they will be brought up to standards		
Was the roof previously coated?		
Describe the existing coating, with type if known. (Adhesion of prior coating is incorporated into the adhesion testing of Enduris)		
Damaged Roof Top Equipment?		
If Yes, identify on roof map. Include pictures or video		

Condition	Check if Yes	Check if No
Damaged flashing, coping cap, drip edge, or other metal flashings		
If Yes, identify on roof map and include pictures or video of damage		
Are there parapet walls?		
If yes, state height, type of construction, condition of exterior and interior and how top will be finished. Also include pictures or video of all wall areas		
Internal or external gutters? Are they in working order?		
If yes, include pictures or video of the entire gutter area		
Are there roof drains? Are they in working order?		
If yes identify on roof map and include pictures/ videos of condition of drains		
Are AC unit condensation lines plumbed to drain or gutter?		
If no describe plan to keep water off roof during installation of coating and to properly drain afterward		
Are there scuppers?		
If yes identify on roof map and include pictures/ videos of condition of scuppers		

Condition	Check if Yes	Check if No
Are there areas of poorly adhered existing roofing membrane (seams, field, roof termination)		
If yes identify on roof map and include pictures/ videos		

For Metal Roofs only

Condition	Check if Yes	Check if No
Are there closure strips? (roof termination, ridge caps)		
Is deflection of panel overlaps (both vertical and horizontal), or ridge cap seams, less than ¼” ?		
If greater than ¼”, how will they be brought tight?		
Are there skylights?		
If yes identify on roof map and include pictures/ videos		
On standing seams, were mechanically crimped seems installed properly?		
If no, describe how seams will be repaired		
Are there missing or loose fasteners?		
Is yes, what remedial actions will be taken?		
Do any panels need to be replaced?		
If yes identify on roof map and include pictures/ videos		
Note whether any rust is surface or structural?
