# Welcome to the Cloud

Say goodbye to complicated legacy PBX systems and hello to cutting-edge technology with our infoCloud Phone System. Your team's communication and collaboration will become more productive, effective and efficient as a result.

# Connect virtually anywhere

Working remote is more important than ever, and that's exactly what our infoCloud Phone System lets your team accomplish. We give you options to rethink how you communicate. You can decide if you want a physical desk phone, or just our web and mobile apps.

# Online Video Meetings

infoCloud Video gives you online meetings with a high quality audio and video experience. Reduce travel expenses but feel like you are face-to-face with your meetings, share your screen and so much more.

# SNAP Mobile on the go

SNAPmobile is an iOS and Android application that will allow you to use your infoStructure service anytime, anywhere, from any smartphone device.

# Connect all your locations

Not ready to replace your phone system PBX - no problem!  
Whether your PBX takes direct SIP, PRI or good old analog  
POTS lines, our infoCloud SIP solution has you covered!

# infoCloud Phone System VS SIP Trunking

---

## What's the difference?

### Hosted PBX

Your router / network consists of only IP desk phones which connect to the internet and out to the infoStructure Cloud.

Hosted PBX connects to the cloud, so there is no physical connection beyond your internet.

Monthly pricing is based on either per call session, per user, or per minute depending on your business needs.

Ability to eliminate the need for a physical desk phone, rather use the web portal or mobile app.

Easy mobility to work from anywhere with an internet connection using the web portal or mobile app.

Easy feature and call flow control from an online admin portal.

Little or no maintenance since the "brains" of your PBX are hosted with infoStructure.

### On-premise PBX + SIP Trunking

The physical hardware beyond your internet connection and your router / network consists of an on-premise PBX located at your business. Each desk phone connects to the PBX with wiring in your building.

SIP trunking can be directly connected into your PBX, or if your PBX requires analog lines or a PRI / T1 circuit, we can convert the SIP at your location so your on-premise PBX is happy.

Monthly pricing is based on either per call session or per minute depending on your business needs.

Requires a physical desk phone for each user to connect back to the PBX at your business.

Working remotely is more challenging than hosted PBX, however it can be done with planning and setup.

Limited call control can be done from an online admin portal.

Maintenance to the PBX is done from a qualified vendor.
