

Water Discharge

GRI DESCRIPTION

Total water discharge by quality and destination.

CHOW:HILL METRIC

Cubic Metres (m³) per person for single tenant occupation (Hamilton office only).

TARGET

Was not met.

COMMENTARY

We measure water consumption in our Hamilton studio only as Auckland studio is in a multi-tenanted building with a variety of businesses (including retail) and without separate meters. We assume, though, that as a rough guide our usage per person would be similar.

PERFORMANCE

Consumption this year was approximately 135,000 litres, an increase of 15,000 litres or 12.5% from last year. We put the increase down to increase in staff numbers. Last year we agreed to add a pro-rata calculation for Auckland studio. This has added approximately 225,000 litres for Auckland.

IMPACT

The impact in real terms (15m³ of water) is not dramatic in real terms, but nevertheless is not positive.

TARGET 2019-2020

We would like to maintain the current level of consumption for both studios.
