

Energy Consumption

GRI DESCRIPTION

Direct energy consumption by primary energy source.

CHOW:HILL METRIC

Electricity account: watts per person / per office / per square metre.

TARGET

Was met.

COMMENTARY

We consume electricity in our two studios; each studio is tenanted and therefore we do not have direct control over mechanical systems which serve each.

PERFORMANCE

Our consumption this year has been 170,871 kWh (approximately 2,550 kWh/pp on our yearly average workforce, down 4 kwh/pp from last year).

The total difference YoY is 4,892 kWh or around 2.95% more than the 2017-2018 year.

IMPACT

Our environmental impact has increased slightly. 2018- 2019 our emissions were 20.47 tCO₂e compared to 19.75 in 2017-2018. The impact by average FTE however, has decreased by 4kWh per person.

TARGET 2019-2020

We hope to see a minor improvement in the 2019-2020 year.
