

# Recycled Materials Used

---

## GRI DESCRIPTION

Percentage of materials used that are manufactured using environmentally acceptable products and/or recycled input materials, are recyclable or disposal, are acceptably biodegradable.

## CHOW:HILL METRIC

Itemise and measure consumables: Copy paper, print paper, toilet paper, hand-towels, tissues, waste bags, cleaning products.

## TARGET

Was already met for paper products and waste bags and target now fully met due to choice of cleaning products now being purchased and used.

## COMMENTARY

We look to maximise the use of renewable or recyclable resources and aim to achieve 100% across all consumables.

## PERFORMANCE

We have 100% recyclable material and/or containing recyclable material for paper products and waste bags. We have now achieved 100% for cleaning products as there are a few items that do not meet our standard previously – these were surface cleaning products. We now use all Eco Store products for the dishwasher and dish detergent, and for surface cleaning products, all whose containers are manufactured from sugar cane rather than plastic, and whose contents are plant based.

## IMPACT

Less impact during 2020 as all products met the GRI description.

## TARGET 2021-2022

We will continue to purchase and use only GRI Description products across both studios and therefore achieve 100%.
