

Water Discharge

GRI DESCRIPTION

Total water discharge by quality and destination.

CHOW:HILL METRIC

Cubic Metres (m³) per person for single tenant occupation (Hamilton office only).

TARGET

Was met.

COMMENTARY

We measure water consumption in our Hamilton studio only as Auckland studio is in a multi-tenanted building with a variety of businesses (including retail) and without separate meters. We assume, though, that as a rough guide our usage per person would be similar.

PERFORMANCE

Consumption this year was approximately 125,000 litres, a decrease of 10,000 litres, or 7.4% from last year. Two years ago, we agreed to add a pro-rata calculation for Auckland studio. This has added approximately 187,500 litres for Auckland.

IMPACT

The impact in real terms (10m³ of water) is not dramatic in real terms, but nevertheless is positive.

TARGET 2021-2022

We would like to maintain the current level of consumption for both studios.
