TECHNICAL PROJECTS

FacePlant - [Github](#) | [Demo](#) | Solo project

The first social media platform for house plant enthusiasts to connect over their beautiful plant collections.

- .. Built with JavaScript, React, PostgreSQL, and pure vanilla CSS in 2 weeks
- .. Created complex many-to-many model relationships between User, Plants, Comments, and Likes
- .. Gorgeous user interface design providing immersive PLANTFUL experiences

Feather & Stone - [Github](#) | [Demo](#) | Solo project

A contemplative single page application for logging daily reflections with comforting no-rush timer.

- .. Built with Ruby on Rails and vanilla-Javascript after 2 weeks of learning JavaScript
- .. Persisting journal entry data when edited or created by user
- .. Designed a simple user interface for a calm and pleasant experience

Magic Tutoring - [Github](#) | [Demo](#) | Group project

A scheduling app for young witches and wizards to order tutoring conclaves with experienced professors.

- .. Created intricate relationships to allow user to create account as a professor or student and interact with calendar
- .. Designed student dashboard page to show student's upcoming conclaves and calendar
- .. Connected subject, student, and professor models for dynamic user navigation

Accountable and Responsible
Self-managing and autonomous

Meticulous attention to detail
Adaptability to changing work environment
Engaging communication and interviewing
Public Speaking
Building rapport and community

DEAR READER,

Nice to meet you, my name is Inée (pronounced “ee-NAY”), thank you for reading!

I am interested in the job posting for Software Engineer because I’m looking for a supportive community where I can grow and enhance my skills.

At the end of January 2021 I will have graduated from Flatiron School for full-stack Software Engineering. I LOVE front-end developing, and that’s my area of preference and focus! My background is actually in human biology, alternative healing modalities, herbs, and nutrition; it was only 5 months ago that I decided to dive into the deep ocean of tech!

This industry is highly competitive and fast-paced, so the entire field seems rather daunting and immense to me. I know I have a lot to learn still, and I may not be the top choice in terms of my current coding skills; however, I am confident I can learn anything, and am faithful to the Growth Mindset and the Abundance Mindset. I can bring unlimited enthusiasm and spirit to the workplace, in addition to gumption, determination, and energy.

I’m humble in attitude, and I’m always eager to learn new things, study, and research topics I’m unfamiliar with; I’m constantly working to improve my Self, and my job performance. I ask many engaging questions, and am objective and curious with new information. I’m trying to seek a place that aligns with MY passions, interests, and culture. I produce my best work in a collaborative, forward-thinking atmosphere where I connect with my team over projects that enhance the human experience.

In the work place, I am independent and autonomous. If there is something I need more clarification on, I will not hesitate to voice my questions and chase that answer. When I have a clear understanding of my responsibilities, duties, and deadlines, you can expect me to complete my tasks with professional thoroughness and efficiency.

I’m not averse to open, honest, and direct communication, and I strive for mutuality in building rapport in the work place. I have a very infectious and enthusiastic personality, so naturally the people I work with feel very pepped-up with my vibrant style and exuberant antics! I learn by doing, observing, questioning, and experimenting—no matter what, I’m tenacious and I will not stop until I’m satisfied and confident in my knowledge and execution.

I hope this was an interesting read for you! Have a wonderful day!

With gratitude,

Inée Ader
