	Y/N
Priority to reported and concluded transactions	Y
Sole-sourced data from trading principles accepted	Y
Inter-affiliate data accepted as valid	N

Futures prices as specified in the 'Criteria for Inclusion' are weighted by the relevant Regional Production Ratio.

**REGIONAL PRODUCTION RATIOS**

Regional production estimates are calculated based on global production:

GX Code, Title, Value (from 1st April 2020)

GX0000030, Middle East Production Ratio, 0.32952

GX0000031, Americas Production Ratio, 0.31611

GX0000032, Rest of World Production Ratio, 0.35437

**ALIAS DEFINITIONS**

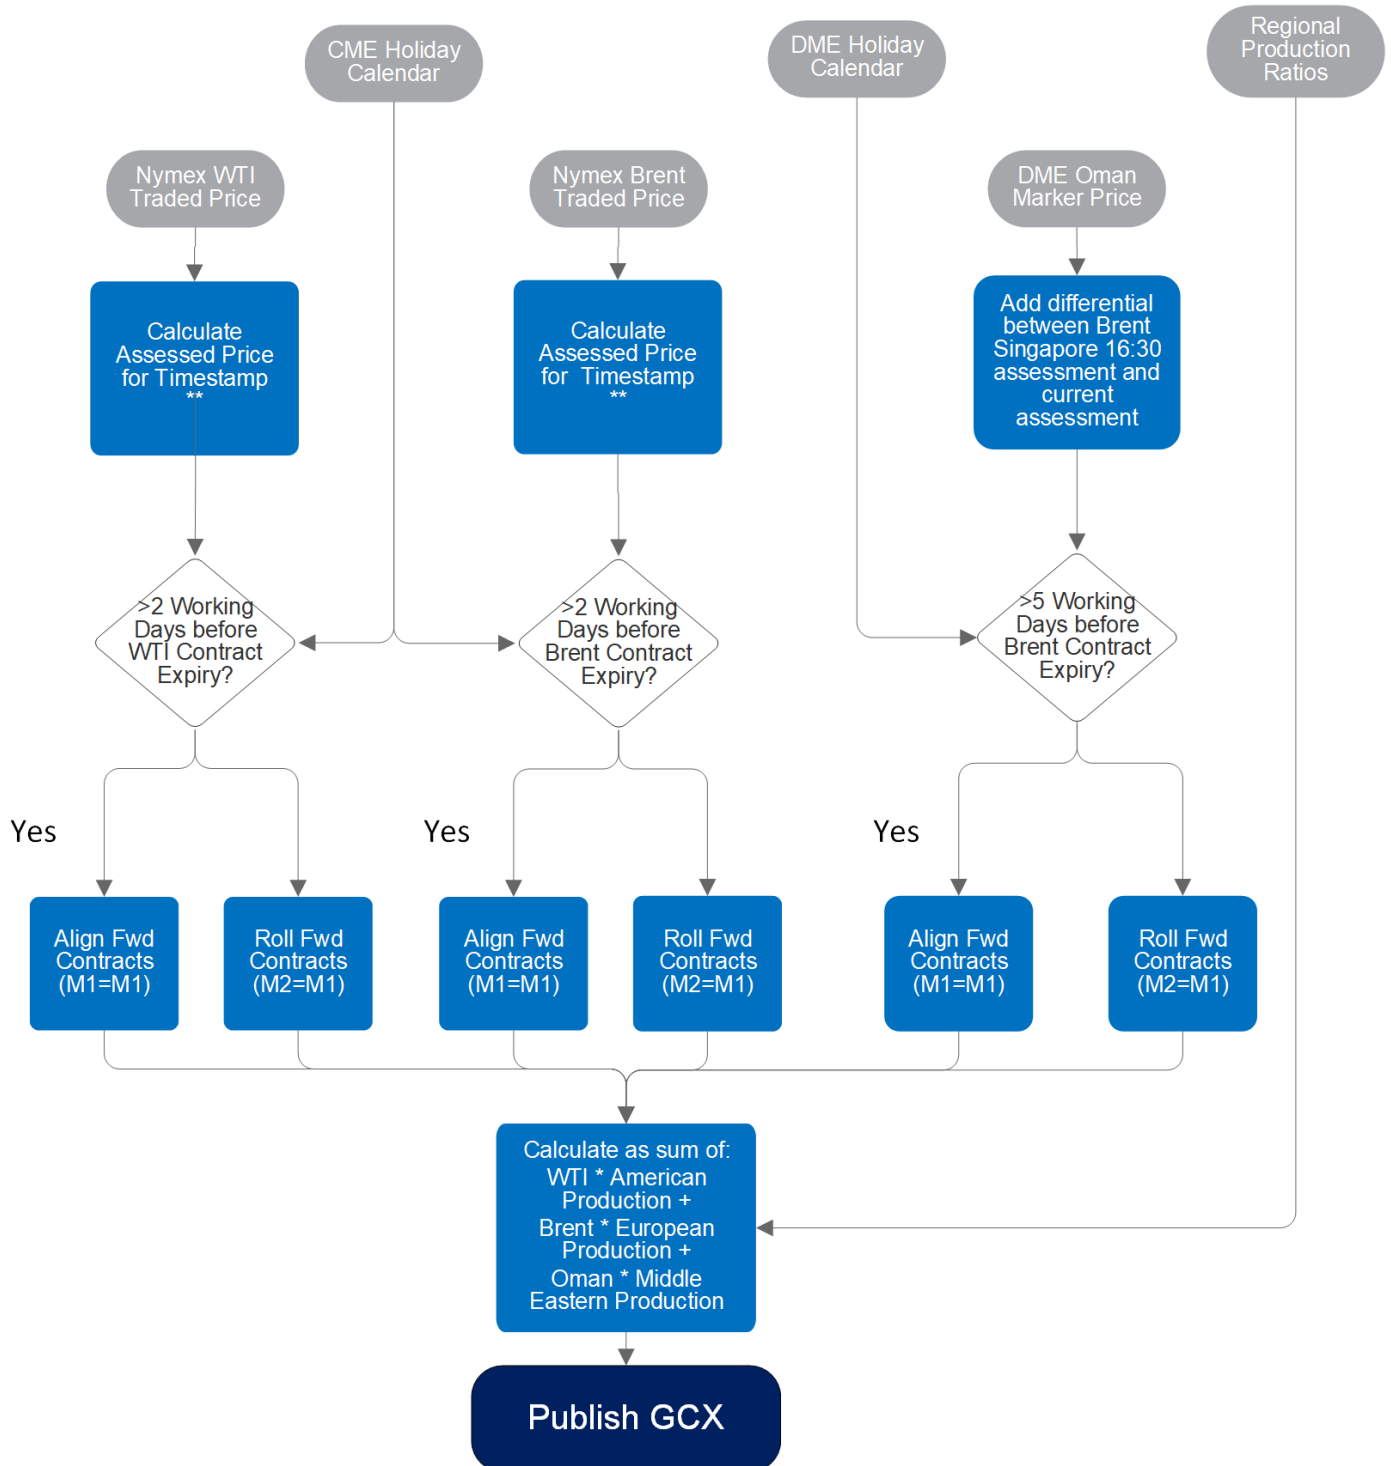

ALIAS	TIME	PERIOD TYPE	PERIOD
GCXN	1230	Month	1
GCXC	1630	Month	1

**FACTSHEET INFORMATION**

Factsheet version	1.0
Factsheet valid from	1-Apr-2020
Factsheet valid to	(ongoing)

## CALCULATION DETAIL

\*\* Where no ticks were traded in the minute prior to the assessment time, an assessment is derived based on the following priority: 1). Relationship to traded product for same market based on differential at point where both last traded 2). Adjustment to WTI / Brent price based on differential at point where both last traded 3). Last traded price. In the event that there are no trades or a paucity of trades, GX will determine the relevant value based on its expertise and knowledge of markets. GX could base its determination, but not solely, on bids and offers in futures markets, relational values in other futures indicators and/or bids and offers in related markets.
