

FOR IMMEDIATE RELEASE

Kick Your Grinding into Mach Speed with CPS Mach Hybrid Series

Norris, TN – September 13, 2021 – CPS Mach Hybrid Series are aggressive, yet versatile tools made to speed your process up, without sacrificing quality, and without losing time to glazed tooling or heavy scratches.

CPS Mach Hybrid Series diamond tooling has been specially formulated to cut like a metal without the glazing and heavy scratches, preparing and honing the surface for further steps and are the perfect transition to CPS resins. It can also be used as a starting point on new construction concrete slabs as well as most other concrete floors.

“I’ve used a lot of different transitionals over the years as a contractor and the Mach Hybrid series stands out above the rest. They are a fast-cutting tool that have never let me down.”, says Dewayne Curry, Sales and Technical Support.
