TRANSFLO® Velocity+

> "*Velocity+ is for 3PLs and brokers that want to improve cash-flow, eliminate paperwork, and establish stronger digital ties with shippers, carriers, drivers, and their own back office*"

Transflo Digital Ecosystem

Founded in 1991 as Pegasus Imaging, our company began in scanning and began to pave the way for transportation technology. Today, Transflo stands proudly as a provider of an advanced digital ecosystem that works with over 60,000 Carriers and 300 Brokers.

Our digital footprint consists of 1.3 million app downloads, over 500 million documents processed and $84 Billion in invoicing. Together, this equates to a powerful platform for both carriers and brokers to utilize in their pursuit of operational excellence.

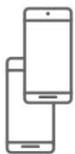

TRANSFLO®

$ **Payment Processing:** Velocity+ eliminates back-office work and optimizes cash flow. It supports Quick Pay, so brokers can pay carriers faster than the normal pay cycle for a discount.

POD Availability: Velocity+ prompts the driver to scan their paperwork on location, providing the broker with an immediate Proof of Delivery.

Load Tender: Velocity+ sends shipment details to the carrier and driver automatically, so information about the load reaches the driver on a mobile device without requiring a phone call.

Auto Invoice: Automated invoice workflows make it easy to generate and distribute invoices quickly and with the right supporting documents. Velocity+ can also automate the validation of receipts for lumper services, accessorial fees, and other chargeable expenses.

Data Validation: Velocity+ uses OCR to verify different types of trip documents, extract the data, and reconcile shipment details with shipment documentation. Transflo has OCR experience that is backed by the processing of 500 million documents annually and a team of processors that handle OCR exceptions.

Load Visibility: Velocity+ enables real-time load tracking and allows the broker/3PL to provide status updates and push driver confirmations on pick-up and delivery, straight to the customer.

Document Capture: Brokers/3PLs can receive, digitize, and electronically catalog carrier documents in their TMS using one consistent format.
