The Power of Turvo, The Simplicity of One

Break free of siloed workstreams, manual data entry, redundant processes and streamline your business with Turvo.
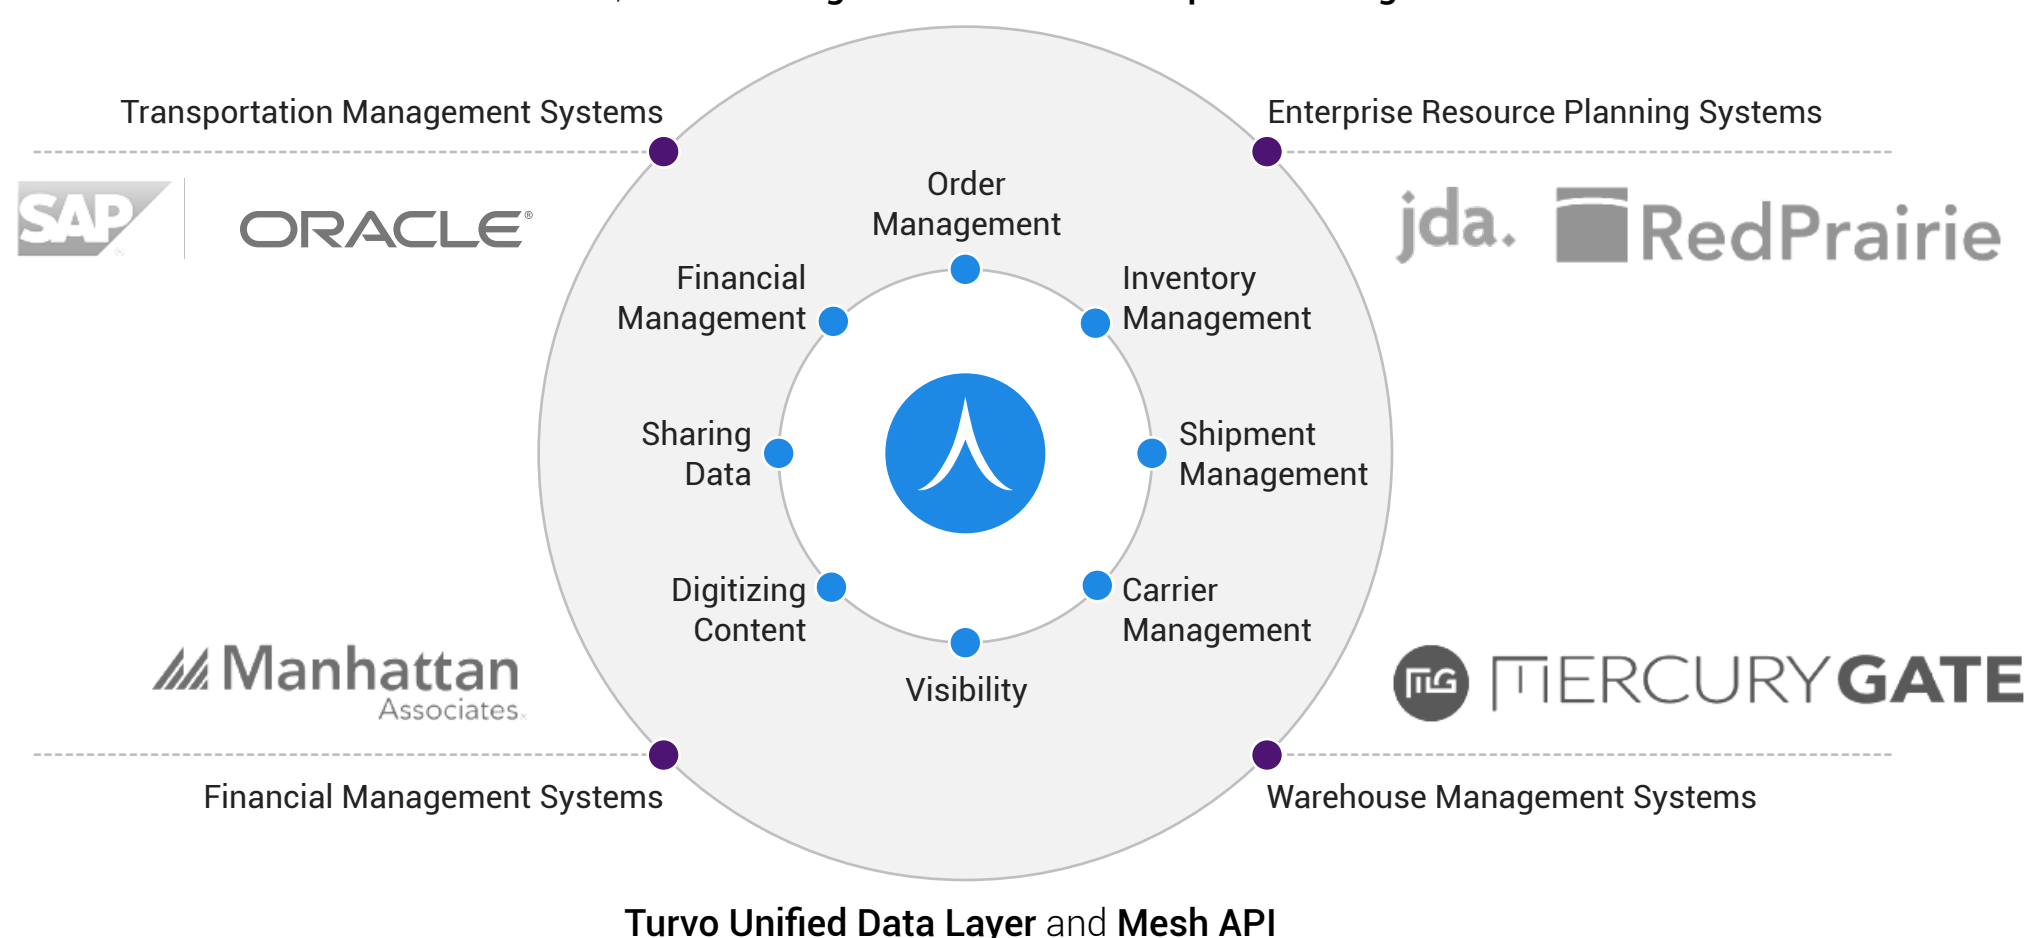

Turvo is a logistics platform that provides end-to-end, multi-collaboration and visibility from order to cash — across inventory, shipments, carrier tendering, invoicing and settlement — solving the swivel chair approach to sourcing and sharing information within your logistics network. Eliminate time wasted toggling between multiple systems and increase productivity by accessing shared logistics data from a single source with Turvo.

Unlock the Opportunity of a Unified Network

Turvo helps synchronize the technologies that drive your business, enabling real-time decision making and execution. Turvo connects your workflows and business processes across legacy systems to provide you, your customers and your service providers with shared visibility into orders, shipments and inventory. By connecting shippers, logistics providers and carriers into an integrated ecosystem, Turvo empowers your business by creating endless network opportunities to reach more customers and service providers.
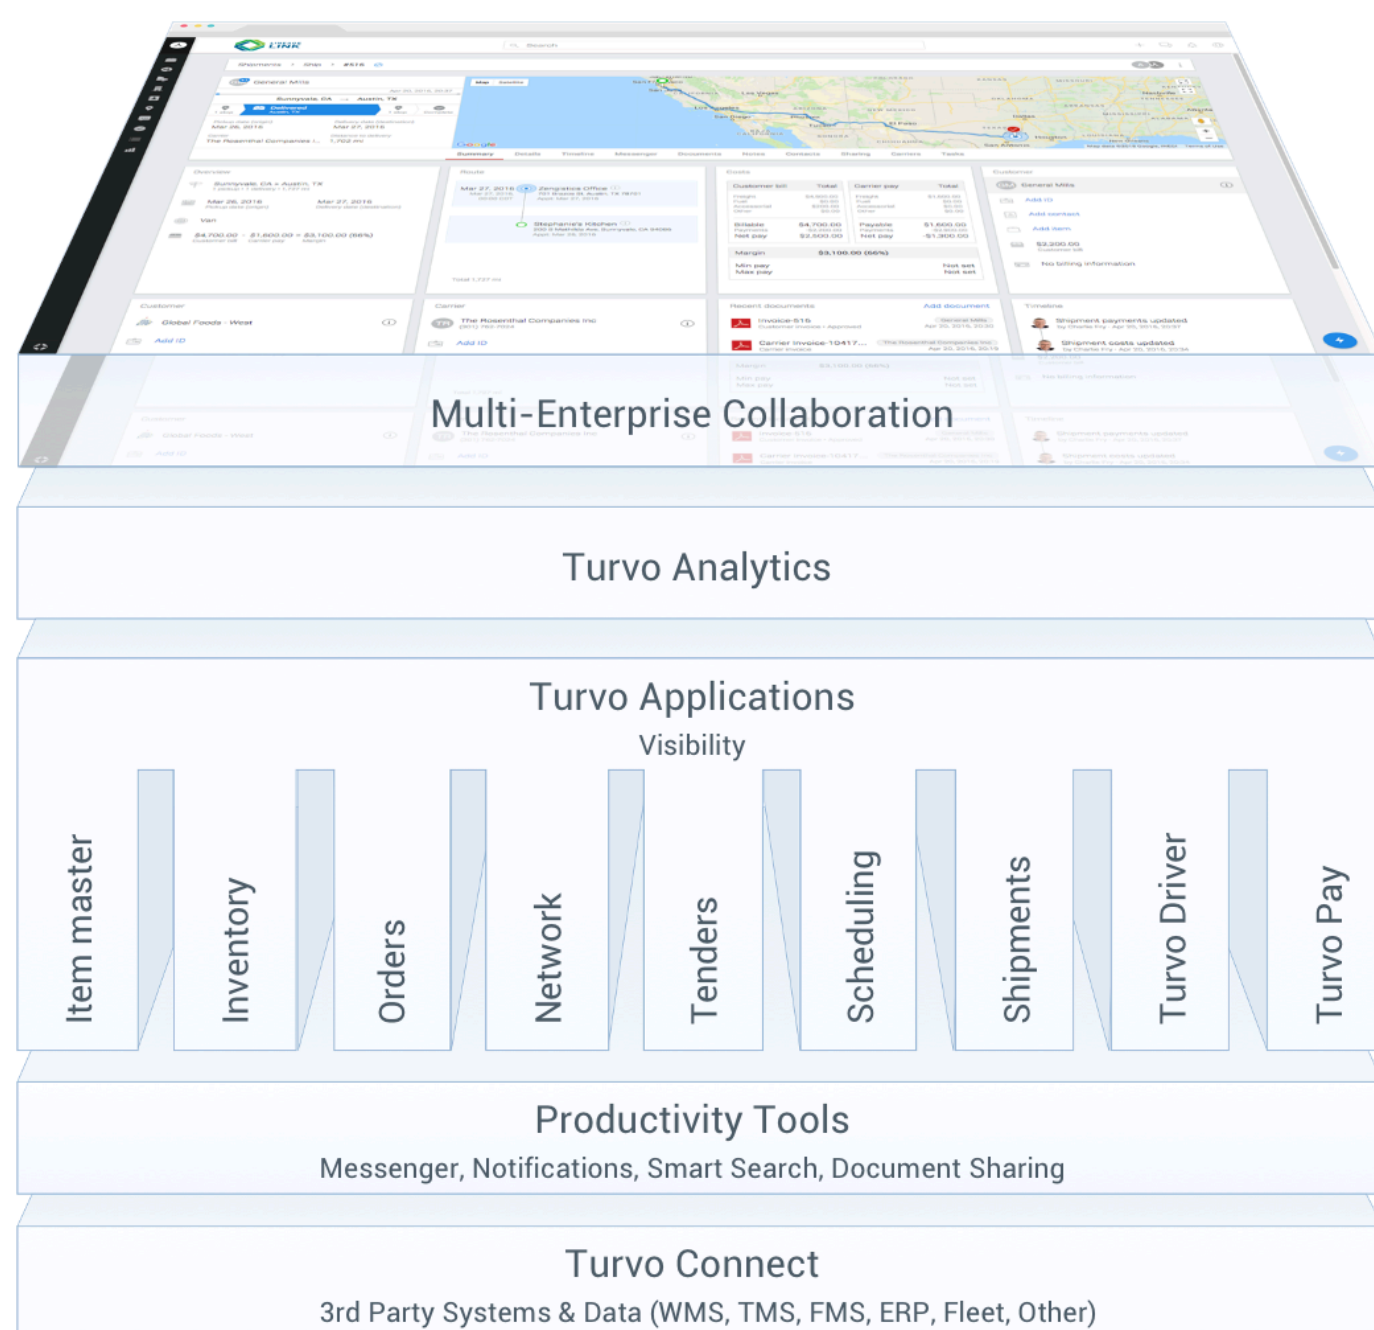

Collaboration, from **sharing** to **execution** to **exception management**

Transportation Management Systems — SAP | ORACLE

Enterprise Resource Planning Systems — jda. | RedPrairie

Why Turvo?

The future of logistics is here, and it's network collaboration powered by Turvo. Turvo digitally transforms the status quo in supply chain and logistics, as the single thread that connects every system, process and person effortlessly. Turvo's flexible architecture enables logistics providers to rapidly scale and connect with ecosystem partners without the need for expensive, EDI integrations. Turvo's connected network drives real-time collaboration across multiple parties, heightening visibility, data exchange and exception management.

Features & Benefits

Powerful Sharing Capabilities: Turvo allows users to share items, orders, inventory, rate agreements and shipments in a contextual environment. Parties can collaborate seamlessly and focus on performance instead of business process.

Unparalleled Visibility: Track shipments in real-time from dispatch to delivery using the Turvo mobile app. Know when your driver leaves and arrives with updates along the route.

Business Efficiency and Analytics: Order to shipment in minutes. Turvo connects data between multiple business solutions to synchronize the performance of your organization. Give your customers digital email invoicing, document capture and self-service access to track shipments.

Flexible Product Architecture: Connect with anyone, anywhere to move things. Turvo simplifies complexity with one connected cloud-based platform that empowers everyone across the supply chain to make smarter, faster, more informed decision.
