

# REDWOOD CONNECT

## Features at a Glance

### Orchestration Out of the Box or Bring Your Own

RedwoodConnect offers a fully capable rule-based orchestration engine behind the scenes allowing you to efficiently chain multiple processes. Or, if you currently have your own orchestration engine, use RedwoodConnect's APIs directly and move the data you need from all your systems together with ease.

### Listen and Respond to System Events

RedwoodConnect's event based architecture means you know when events happen right away. RedwoodConnect's event streams allow you to trigger any number of actions from launching other processes to sending email.

### RedwoodConnect's Infrastructure is Flexible

RedwoodConnect was created to co-evolve with your business needs. The process of transforming your data, integrating new 3rd party services and filling data lakes no longer requires your team to move mountains.
