

Direct ChassisLink Pools: Delivering a Great Trucker Experience

When truckers have a great chassis experience, the entire supply chain benefits. Ocean Carriers move their containers, 3PLs meet their contract requirements, Rails avoid ramp congestion, Shippers get their goods on time, and so on. That's why DCLI has invested in the quality, safety, and operational efficiency of our proprietary pools, the DCLP, with the goal of transforming the way that chassis work within the intermodal supply chain:

- ✓ **\$250 million invested** in new build chassis
- ✓ **\$85 million invested** in equipment quality upgrade and chassis refurbishment
- ✓ **150,000 chassis** operating on radial tires
- ✓ **85% of our chassis fleet** has LED lights
- ✓ **450+ start/stop locations** at ports, depots, and ramps

But we're not done yet.

2021 and Beyond

We are focused on multiple programs that address every aspect of our business to ensure truckers have access to reliable, high-quality DCLP chassis.

Radial tire conversion acceleration with Memphis and the Gulf Port region
100% radialized this year

Customer service and account management expansion

Improved inventory information accuracy and frequency

Disputes process enhancements for quicker resolution

Technology-based road service program improvements

We are proud of what we have achieved in the DCLP and are excited to reach our ultimate goal: becoming the industry's chassis partner of choice.
