

CTSO – MARKER DISCS

Overview

Disk Markers provide an easy and accurate method of precisely locating flush-mounted facilities, which can become covered by backfill, snow or ice. The four-inch disk marker is easily fastened to the underside of non-metallic covers of hand holes/vaults either during construction and maintenance.

Disk markers are easily and accurately located using a Locator. The locator transmits a signal to the buried marker. The marker returns the signal to the locator, indicating the marker's exact position. The electronic locator gives both a visual reading and an audible tone.

Note: Disk Markers are **not** intended for direct burial.

Features:

- Accurate even in congested areas to help eliminate miss-locates
- Durable and long lasting passive antenna encased in waterproof shell
- Frequency and color-coded to help specify Communications or Telephone
- Easy to use and install – minimal training needed for locating
- RFiD capability for positive identification

Ordering Information

Part Number	Description
CTSO-MD-CABLE	4" Marker Disc for Cable TV
CTSO-MD-TELCO	4" Marker Disc for Telecommunications

Specifications

Size: 4" diameter x 0.38" deep

Weight: 1.4 oz. (39.7 g)

Ranges

Detection Range: 5 ft (1.5 m)

Operating Temp: -4°F to 122°F (-20°C to 50°C)

Storage Temp: -40°F to 158°F (-40°C to 70°C)

650 Rupert Street | Unit #6 | Waterloo ON | N2V 2R8
