

RUBICON SPEC SHEET

This is a UI template that is adjustable to work with most standard systems. Each system is made to order and is tied to the MAC address of the processor. Many features of the system are configurable from the hidden tech page while others are adjustable via programming.

Your Crestron programmer will be provided with compiled files for the processor and touch panels. The processor file will need to be installed onto an open program slot on a 3 or 4 series processor, we recommended program slot 1.

Signals are provided via RSD's allowing your programming team to tie in any back end system. Your programmer will be responsible for implementing all back end programming. A demo program is provided.

THE UI SUPPORTS:

LIGHTS	CLIMATE	AUDIO	VIDEO
SECURITY + CAMERAS	SHADES	ACCESS	POOL/SPA

32 ROOMS [EXPANDABLE TO 64 ROOMS WITH OUR DESIGN CUSTOMIZATION PACKAGE]

- Can be dynamically assigned across 1-6 floors via touch panel tech page
