

## AT&T Secure Family™

### What is it?

Secure Family is an app by AT&T designed to provide connected families with a sense of security and safety as they introduce new technology and teach their child how to safely use their phone. Secure Family supports up to 10 lines on the AT&T wireless network and is available to customers of AT&T, Cricket, Verizon, T-Mobile, and Sprint.

### The benefits to parents

The Secure Family app from AT&T benefits parents by allowing them to create a controlled environment where their children can learn to benefit from having a phone, while still providing oversight of their usage and habits. By utilizing location tracking, real time alerts, and screen time management tools, parents are assured that their child is safely accessing appropriate content on their phones and maintaining a healthy balance of tech and screen-free time.

### Highlighted features

#### 1. Location tracking

Using an interactive map, parents can track their child's location using GPS and receive notifications when their child arrives or departs a specified location, such as home, school, or other activities. Secure Family also provides up to a seven day location history.

#### 2. Alerts and status updates

Secure Family shows parents the battery status on their child's phone, providing them the opportunity to monitor the responsibility of the child. The app also provides location updates at scheduled times, and alerts parents if the child tries to tamper with their phone pairing with the parent or attempts to remove the Secure Family child Companion app.

#### 3. Managing screen time

Parents can filter and block age inappropriate apps and content as well as pause their child's Internet access (both WiFi and mobile data) on demand or on a schedule to designate times for screen-free activities: homework, family time, or bedtime.
