Egg Drop Competitive Analysis

Hi, Jake!

Eggcellent job on your egg drop! Not only did your egg's casing provide the least drag coefficient of all other projects, but it outperformed all other projects within your age range by a long shot as well! Even when dropped from a height of 5 ft, your egg both dropped more slowly than those of the other submissions, but sustained your egg's integrity on impact. We're excited to see how your next project performs. Keep up the great work!
