

Registry Analytics Evaluation Checklist

Does your registry technology:

Ensure measures and reports are clinically meaningful to both your physician or provider community and your patient population?

Remember: If it doesn't matter, it's not worth measuring.

Use both standard and tailored benchmarks that draw from industry and specialty data sets to ensure you're comparing apples to apples?

Remember: This is key to building engagement and trust.

Provide timely feedback and actionable insights down to the patient level?

Remember: Meaningful change happens through action.

Enable data-driven decision support through future forecasting and predictive analytics?

Remember: Great technology should enable better decisions.
