

# TEMPORARY SERVICE AGREEMENT

*For service during construction*

In accordance with MEA Tariff (Section 4.02 and 4.03), a temporary service should be used for construction purposes only. An Applicant requesting temporary service must contact MEA to acquire permanent service for the site within nine (9) months of the temporary service being energized. Failure to comply with the Temporary Service Agreement will result in additional costs and/or disconnected service.

**Applicant shall be responsible for the following:**

- Ensuring the site described below meets all requirements to obtain permanent service within nine (9) months of the temporary service being energized. Details on permanent service requirements can be found in the MEA Service Assembly Guide.
- Contacting MEA to acquire permanent service within nine (9) months of the temporary service being energized.
- In the event the Applicant has not constructed premises eligible for permanent service at this location within nine (9) months of the temporary service being energized the Applicant agrees:
  - to reimburse MEA the actual cost of the initial temporary service installation. Keep in mind these costs are covered by MEA if the Applicant establishes permanent power within nine (9) months of the temporary service being energized.
  - to cover the costs associated with the removal and disconnection of the temporary service.

An Applicant in need of a temporary service extension (temporary service beyond the nine month construction allocation) should provide MEA an extension request in writing. MEA will determine if the premises will be eligible for permanent service within a reasonable period of time and grant an extension accordingly.

Please sign below that you (the Applicant) agree to the terms and conditions of the Temporary Service Agreement.
