

## MEA-Compliant 100-200A Single-Phase Meter Bases

The following 100-200A single-phase, single-gang meter bases have been approved for installation in MEA's service territory. If you have a question on whether an unlisted meter base will pass MEA inspection, please contact the Engineering Technician assigned to your work order to request review and gain of pre-approval. Please make this contact prior to the purchase and installation of the meter base to prevent a failed inspection of a non-compliant meter base. To pass inspection, all MEA Service Guide and safety criteria must be fulfilled, including the proper application and installation to industry best practices and applicable codes.

MEA does not endorse any brands or products. This list is not comprehensive and more complex metering gear and service entrance equipment, namely multi-gang meter bases, may be required in which case MEA advises the reference of the MEA Service Guide and consultation with the assigned Engineering Technician. This list is simply a representation of the known, locally available meter bases and is subject to annual review and may be updated intermittently. Please ensure that you have the latest version available at [www.mea.coop](http://www.mea.coop).
