Mining 4.0: The Road to Success

The transition to Mining 4.0 has had a profound impact on the global mining industry. And while research indicates that more than 30% of mining companies have yet to implement a digital strategy, those who have, have been able to achieve strategic advantages, including improving operational efficiency, reducing unsafe incidents and optimizing carbon footprint.

Join Symboticware's CEO, Ash Agarwal, and industry and technology experts from Major Drilling International and Cyngn as they discuss the role of IoT technology and how companies can leverage smart, actionable data to streamline management of equipment and mobile assets in mining operations. You'll learn:

- What Mining 4.0 is all about, what businesses can do to get started and how to go from planning to execution.
- How mining companies can reap the benefits of the fourth industrial revolution in a way that's sustainable and well received by the workforce.
- How to navigate the mining technology space to distinguish between innovative and obsolete technologies.
- How to reduce fuel consumption and GHG emissions by monitoring and optimizing driver behavior and vehicle operation.
- How to improve safety with the use of collision avoidance systems, and more.

Attendance is free but spaces are limited, so please email us at marketing@symboticware.com to register.
