# Communicate with your drivers, safely.

## Round out your safety initiatives with in-cab notifications.

**Drivewyze Safety+** makes it easier to talk to your drivers, right when they need to hear it.

Set up your own virtual signs that automatically show when drivers reach a certain point on their route, like a yard entrance, specific destinations, or known hazards. Improve communication, reinforce good performance, and encourage safer decision-making with our proven notification system.

DRIVE SLOW
Reduce Speed in Yard

## VIRTUAL ROAD SIGNS THAT KEEP DRIVERS INFORMED

Notifications are virtual road signs that appear when drivers approach hazardous sections of their route, or places that require extra attention. They use audio and visual cues to keep drivers informed and give them more time to respond in critical moments.

### STANDARD ALERTS

We worked with local, state, and national transportation and safety agencies to identify where drivers could use more time to respond, like ahead of sharp exits, tight curves, low bridges, steep grades, high collision zones, and more.

### SPEED ALERTS

We looked at roads across the North America to determine where your drivers need to slow down, and made notifications that are proven to reduce over-speeding events in these critical locations by more than 27%.*

### PARKING ALERTS

We know it's harder than ever for drivers to find a safe place to park, so we made notifications that signal open rest areas with available stall counts.

### CUSTOM ALERTS

We understand each fleet has unique challenges, so we made it easy to make personalized, location-based alerts. Use them to remind drivers of safety protocols, guide them through a yard, or welcome them home.

## INSIGHTS THAT HELP YOU IMPROVE PERFORMANCE

Insights make it easy to see how your drivers respond in critical situations. With individual and fleet-wide reporting, you can see the impact of your notifications, identify your best performers, and understand where additional training may be required.

Drivewyze Safety+ can help reduce accidents, improve safety scores, reduce risk, and improve performance. All of our solutions are easy to set up, easy to use, and easy to report on. They don't require additional resources to work (like expensive hardware or more staff) and integrate with your in-cab tools (like an ELD, tablet, or phone), making it easy to improve your fleet's efficiency while avoiding costly accidents and timely roadside stops.
