

# PLATFORM SCIENCE FORM MESSAGES

Transition from legacy macros systems and into the streamlined future. Platform Science Form Messages enhance your TMS by enabling drivers to send and receive configurable forms to and from your back office.

**FLEXIBLE FORMS YOU CONTROL** - No two fleets operate the same so why be constricted to “one size fits all” forms? Form Messages gives you the ability to create forms for your fleet’s specific use cases to give you the data you need to improve operations and save time.

**REAL-TIME DRIVER DATA** - With our PS Workflow integration, active job data is shared to Form Messages to automatically fill in the fields needed to submit. Drivers drastically reduce time needed to complete tasks and back-office staff can rest assured accurate information is being shared.

**STREAMLINE COMMUNICATION** - Reduce back and forth communications between drivers and dispatch by building out forms that collect only the information you need to get the job done.

**EASY-TO-USE INTERFACE** - Form Messages are intuitive and simple to use. Drivers just need to enter data into the necessary fields and they’re ready to move on to the next task.

**FORM HISTORY** - Give drivers and administrators easy access to their form histories and previous responses so they don’t have to search for papers or emails.

**PS WORKFLOW INTEGRATION** - Track all your shipment-specific forms in one place. Form Messages’ integration with PS Workflow brings all your fleet’s documents to your dashboard.

# FORM MESSAGES

## Feature Spotlight

### FORM BUILDER

Build highly configurable and data-driven forms that enable automated capture of job information to support day-to-day activities.

### INTEGRATE WITH YOUR TMS

Form Messages shares information and data your legacy TMS can understand and communicate with via our platform and customizable APIs. You can upgrade communications without having to upgrade your TMS.
