

PLATFORM SCIENCE NAVIGATION

Give your drivers the power to navigate confidently and safely with Platform Science Navigation. You'll find truck-safe, turn-by-turn routing designed for commercial trucks of all sizes. Routes are built to get drivers to your customers on the fastest and safest routes possible.

Build dynamic truck profiles

Keep trucks on the right roads for their type with profiles based on height, weight, length, axel count, and more.

Create custom points of interest

Help drivers and planners build more efficient and affordable routes with custom points of interest. Get granular with the ability to call out specific loading dock locations and other details with latitudinal and longitudinal inputs.

Focus on the road ahead

Keep drivers' eyes on the road and off their screens with turn-by-turn visuals, lane guidance, voice guidance, and night mode.

Integrate with PS Workflow

View HOS and other load data directly in the PS Navigation application to prevent app-switching while on the go.

Stay road & weather ahead

Receive real-time traffic and weather alerts and monitor speed violations based on thresholds you set. Our speed widget tracks speed and informs drivers when they've exceeded the limits.

Access post trip reporting

Build smarter routes over time by analyzing trip data including average speed, miles traveled and trip duration.

Customize your fleets routes

Modify your fleet's maps to include "no-go" zones using our avoids feature.

PLATFORM SCIENCE NAVIGATION

Feature Spotlights

Route creation

Create routes with multiple stops, rearrange stops, or search for destinations such as fuel. It's easy to build your own routes on the fly or receive routes from PS Workflow.

Favorite places

Have a preferred fuel stop? Make it easy to track with the favorites feature. Add your favorite places for quick access to places you frequent.

Vehicle configuration

Ensure you route correctly with vehicle profiles. Build your profile with pre-built or custom data and add hazmat details with ease.
