COURSE OUTLINE

The key to monitoring the health of the oral soft tissues is the ability to compare the appearance and presentation from one visit to another. Capturing and retaining such images digitally is convenient, cost-effective and can be integrated very easily into a patient's electronic record. This approach also makes it much easier to transmit the information to patients and to third parties to whom the patient might be referred for a second opinion.

Soft-tissue photography has its own challenges.

This course aims to provide general dentists with some tips on photographing soft tissue with devices that are readily available in dental surgeries, such as intra-oral cameras and mobile phones.

The legal issues associated with photography and the sharing of images will be discussed. Participants will be invited to participate in a hands-on exercise using mobile phones.

This course is not a comprehensive guide to photography. The presenters are from three dental disciplines, allowing for ideas from different perspectives.

ABOUT THE PRESENTER

Dr Janina Christoforou is an oral-medicine specialist working in private practice in Kalamunda and West Perth. She also has public placements at Sir Charles Gairdner Hospital and Perth Children's Hospital.

Dr Melanie McAlpine is a periodontist practising in Northbridge, along with being a consultant paediatric periodontist at the Perth Children's Hospital.

Dr Armand Putra is a prosthodontist in private practice in South Perth, where he treats all aspects of prosthodontics with special interest in aesthetic and complex inter-disciplinary cases.
