ART Software

ART offers the ultimate support in effectively monitoring and operating Next Payments CRTs.

ART is an innovative, easy-to-use software solution for CRT monitoring. From displaying cash and ticket levels to monitoring active logins and transactions. ART's intuitive interface allows you real time access to essential information.

Beside Microsoft, ART is also available as a Web-based solution for use on tablets and smart phones.

Security & Optional Camera

ART's camera function enables you to take pictures during a transaction. This provides invaluable support when investigating fraudulent transactions.

There is an option to stream the camera pictures related to a terminal to the ART directly, so you can observe a terminal at any time.

Real Time Monitoring

ART provides a comprehensive overview of the CRTs in real time. The status of each device is displayed in a colour code system: green – yellow – red.

ART can also check the status of each internal CRT component.

An additional view shows all cash and paper levels of the CRTs. You can configure minimum stock levels then will be displayed in the same 'green – yellow – red' colour coding, allowing your venue to intelligently schedule refills.

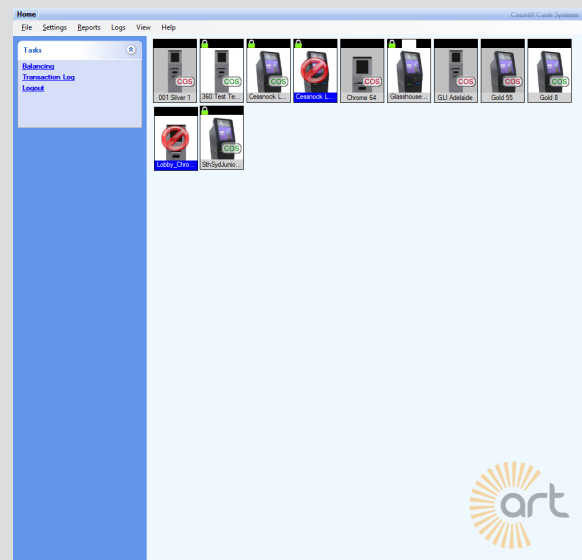

Lifetime meters for all internal components of the CRTs are only one click away. To provide a better overview for longer time periods ART tracks utilisation statistics for the CRTs. As an example, this allows to check the online versus offline times as well as customer transaction time versus idle time.

Reconciliation

Based on the transactions performed on the CRTs, ART allows the exact balancing and reconciliation for all terminals.

Beside opening and closing balances, ART calculates all turnover values for a given time period.

Configuration and Administration

ART is an easy, convenient support tool. You can easily set up user accounts, configure inventory requirements, and update jackpot payout rules.

The application configuration parameters available on the terminals can be configured on ART and sent back to the connected CRTs.

Software updates are managed by ART, providing a full overview, including which software versions are installed on the CRTs. Updates can be done for each single CRT or for a group of CRTs at once.

Optional remote support is also available. This allows your venue to start remote desktop sessions on CRT terminals via a secure VPN connection.

Boost revenue while cutting costs

ART supports you in streamlining your venue's cash processing, increases security, and automates work processes.

Automatic currency exchange rate update

To accept multiple currencies on CRTs, ART handles currency exchange rate updates centrally.

ART is able to update exchange rates from the Internet and push the rates to the CRTs.

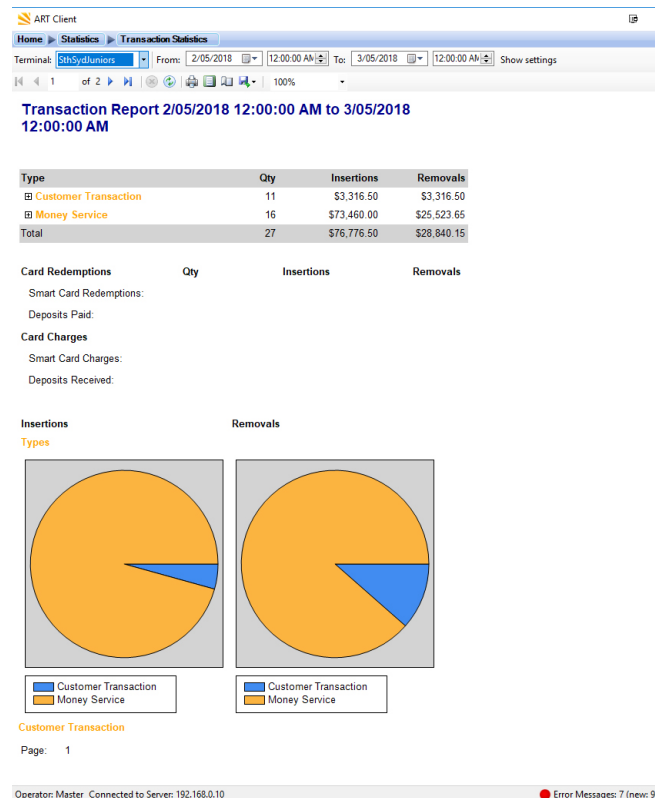

Your venue defines the percentage fee you wish to earn for each currency exchange transaction.

Available on select CRT machines only.

Reporting

ART enables efficient billing and archiving. The software automatically creates log files of customer transactions and inventory data. ART uses this data to produce meaningful reports. Dashboards and reports are customisable to suit your venues needs.
