

Increase Independence

WITH NIGHT OWL REMOTE SUPPORTS

What are Remote Supports?

Remote supports is a technology-based service that allows trained remote support professionals (RSPs) to deliver live support to an individual at a remote location.

Its primary goal is to foster an individual's safety to allow them to live with more independence in the community.

Using technology such as motion sensors, door break sensors, and call buttons, RSPs are able to deliver support in real time, while preserving the individual's safety.

If in-person assistance is needed while an individual is using remote supports, RSPs can dispatch a responder to the home to help.

We Help People Achieve Greater Independence

NOSS has been a leader in the field of remote supports since 2007, helping over 1,200 individuals with disabilities to live with greater independence since then.

Through remote supports, individuals can achieve a greater control over their lives, take responsibility for more activities of daily living, and enjoy the dignity of risk.

Reach out to us at info@nossllc.com, or check our website at nossllc.com to see how NOSS remote supports can help.

Why Choose NOSS?

- Open 24/7, 365 days a year
- Uses less-invasive, sensor-based supports
- Owners have two decades of experience
- Superior Consumer Relations team
- Saves money compared to in-home staffing

Who is Right for NOSS?

Any person receiving overnight staffing, such as on-site, on-call services, could be a good fit for remote supports. Often, people start with overnight hours then add in daytime hours once they get comfortable with the service.
