

## DATA DISTRIBUTION AND WAREHOUSING SERVICE

# Rimes Data Lakehouse

**CTO's and data operations professionals know that the transition to an enterprise-wide data distribution strategy is never easy. The Rimes data lakehouse is a data storage, processing and distribution platform delivered as a service in the Azure cloud.**

Customers each receive a private instance of the platform, built on dedicated cloud resources, hosted in their region of choice. The platform is highly scalable and highly configurable, with the ability to create custom data processing, orchestration and integration workflows using serverless, event-driven functions.

## Key features and benefits:

- Private data lakehouse underpinned by secure, reliable and scalable Azure cloud storage
- Serverless, event-driven functions support complex orchestration, data processing and system integration flows
- Configurable REST API to facilitate system integration
- Integrated, configurable web-based administration and end user reporting portal
- Lakehouse design supports file and SQL-based operations
- Store both Rimes and customer-supplied content
- Single tenant, dedicated instance provides unrivalled flexibility
- Choice of hosting region enables compliance with data residency requirements
- Managed change with integrated CI/CD powered by Azure DevOps
- Multi-level service solutions based on specific usage requirements: standard, custom, managed
- Transparent, usage-based pricing model
