

# Support Structures

## Equipment Platforms

Platforms free up space by raising processing equipment, air conditioning units, generators, and other equipment above floor level. Wynright's platforms are designed for local seismic conditions and compliance with local and national building codes. Stamped drawings and calculations can be provided if needed. Our bolt together design ships compactly, installs easily, and can be relocated if needed.

## Conveyor Support Structures

Wynright provides custom conveyor support structures to carry sorter and transportation conveyors over docks, machinery, aisles and other obstacles. Structures are designed for local seismic conditions and compliance with building code requirements. Columns are placed to avoid building obstructions, maintain traffic aisles and minimize intrusion into usable space. Catwalks can be added for maintenance access.

- Beam to beam or beam to bar joist construction
- Tubular structural columns
- Designed to meet the local codes
- Conforms to conveyor manufacturers' deflection requirements
