

# Project Management

Eliminate project redundancies that stem from inefficient practices and provide visibility across maintenance project lifecycles

Project performance is a persisting area of concern for maintenance management teams across asset-intensive industries. In fact, enterprises lose about 11.4% of their investments to poor project performance and around 30% of projects fail due to lack of properly defined goals and objectives.

The success of any project is determined by the efficacy and flexibility of its management framework and processes. In the digital age, an effective project management framework must rely heavily on data and automation while striving to eliminate misuse of resources.

**Organizations that undervalue project management as a strategic competency witness an average project failure rate of 67%.**

TMA Systems' Project Management module assists enterprises in easily and effectively managing projects that require multiple work orders, budgets, and requisitions. The comprehensive tool does this by tracking all costs, internal work, contract work, and purchases against a project. With WebTMA's embedded Gantt charting tool, maintenance management teams can graphically set up a project and track an unlimited number of tasks and resources.

Construction, renovations, and remodeling, as well as other types of projects can be managed with the Project Management module to share important data on personnel, parts, areas, and other resources.

## The Features

**Track budgeted, estimated, and actual project costs** for internal work, contract work, and purchases

**Create Gantt charts** for projects and project tasks

**Create multiple sub-projects** within a major project

**Track internal costs**  
via work orders

**Track external costs**  
via requisitions

**Assign and track dependencies**  
for tasks

**Limit project approval** to individuals with the proper authorization level

**Automatically update project data** such as labor, materials, and other charges to work orders

## The Benefits

Create detailed estimates for each task and resource

See all work orders and requisitions at-a-glance for a particular project

Easily report on projects with ready-to-run project reports

Convert pre-planned tasks into project work orders

**Discover how WebTMA can transform your organization.**
