A Cultural Paradise: Celebrating Creativity in Collier

Research Appendix

About the Research Appendix

This research appendix includes studies and reports developed to inform A Cultural Paradise, the Collier County Arts and Culture Strategic Plan. The plan was developed between June 2019 and January 2020 and was adopted by the Collier County Board of County Commissioners on March 24, 2020. The research was conducted during that time period, with the exception of the Arts and Economic Prosperity 5 study, which was developed in 2017 by the United Arts Council of Collier County, in partnership with Americans for the Arts and the local nonprofit arts community.

For more information on the plan: https://www.uaccollier.com/programs/strategic-plan/

Market Demand Study

Market Demand Analysis & Mapping

This market demand analysis and mapping report provides context for the Arts and Culture Strategic Plan recommendations. The consultants conducted geodemographic analysis using Mosaic USA, ESRI market potential data, and 2019-2024 U.S. Census demographics to understand the consumer landscape for the local area and region relative to arts and culture participation. This data complements the findings from stakeholder and civic engagement and survey research.

To inform local and regional strategies for the plan, the consultants established geographic drive-time boundaries for four distinct areas from which data was compiled.

- 1. **Everyday Market**—Immediate area within a 30-minute drive time from downtown Naples. This area includes Naples and a few communities just over the Lee County line.
- 2. **Special Occasion Market**—Local area within a 30 to 60-minute drive time from downtown Naples. This area includes the outskirts of Naples, Marco Island and some parts of North and East Naples as well as areas of Lee County that hug the I-75 corridor including Fort Myers.
- 3. **Daytrip Market**—Close regional area within a 60 to 90-minute drive time from downtown Naples outside of Naples. This area includes Everglades City and Immokalee and other rural parts of Collier County as well as areas in Lee County such as Fort Myers Beach, Cape Coral, Lehigh Acres and North Port.
- 4. **Overnight Florida Market**—Extended regional area outside of Collier County within a 90 to 180-minute drive time area. This area includes population areas outside of the other three areas including multiple counties with parts of Miami-Dade to the south, Palm Beach, Martin, and St. Lucie counties to the east, Pinellas, Hillsborough and Polk to the north.

Mapping Demand

Using ESRI data the consultants mapped a variety of arts and cultural indexes to illustrate consumer demand for, a) visual arts (galleries/museums), b) arts performances (classical music/dance/theater), c) commercial concerts (country/rock), and d) hands-on creative activities (painting/drawing/playing music/cooking for fun/woodwork). The maps below illustrate the strength of this demand in the study area.¹

Index data measures the strength of demand for activities relative to a national average of 100. The consultants stratified the indexes into three groups, a) low demand (lower than 100), b) moderate demand (100-130), and c) high demand (higher than 130) reflecting extremes in the market area. If households in an area index at 125, for example they are 25 percent more likely than the average consumer to participate in an activity compared to the national average. Conversely, if they index at 75, they are 25 percent less likely to participate in an activity compared to the national average.²

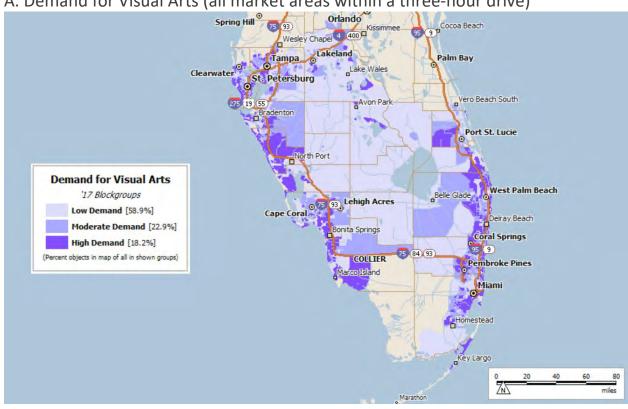

For the purposes of illustration two maps are provided. The maps below illustrate demand for the entire three-hour drive time area followed by a view of Collier County. They are color coded for easier reference with visual arts in purples, arts performances in reds, commercial concerts in greens, and hands-on creative activities in blues. The geographic block groups are shaded from light (low demand) to dark (high demand). Block groups are census-based geography that reflects population density. Smaller shapes on the map are higher population density block group areas and larger shapes are low density areas, mostly rural.

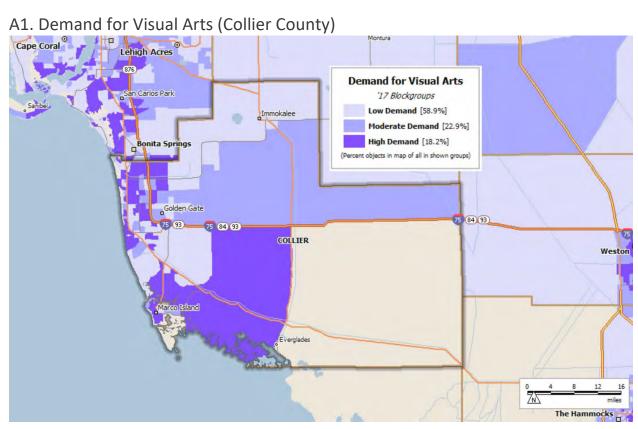

-

¹ ESRI data (2019) includes the following variables that have been grouped for this analysis. While these data do not encompass all of the broad and diverse arts and cultural activities in which people may participate, this is what is available. More specificity in personal interests can be found in the community survey results. Visual arts include visiting art galleries, art museums, and other museums. Arts performances include live theater, live dance performances, and concerts of classical music or opera. Commercial concerts include county music or rock-n-roll shows, and night clubs. Hands-on creative activities include playing a musical instrument, doing painting or drawing, woodworking, dancing, or cooking for fun.

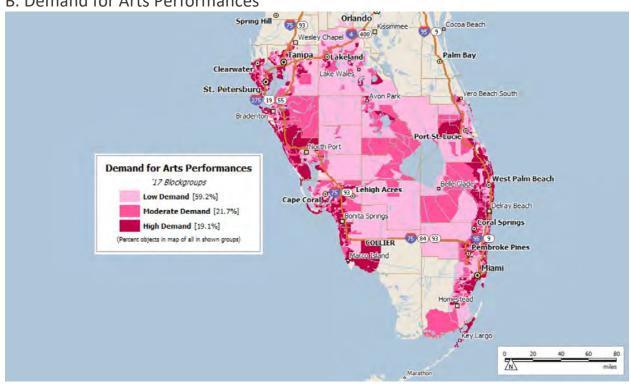

² Index data is calculated on households at the block group level of geography which is the smallest and most stable unit of geography for which this data is available.

A. Demand for Visual Arts (all market areas within a three-hour drive)

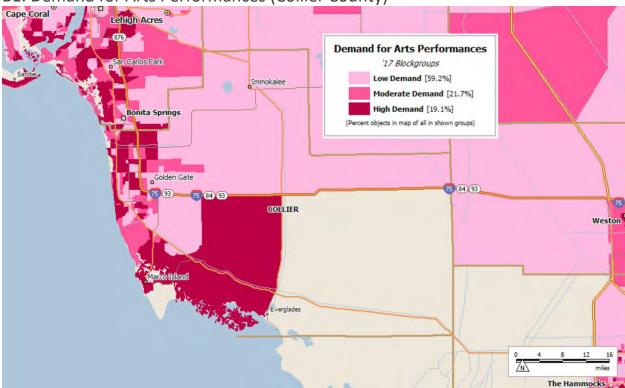

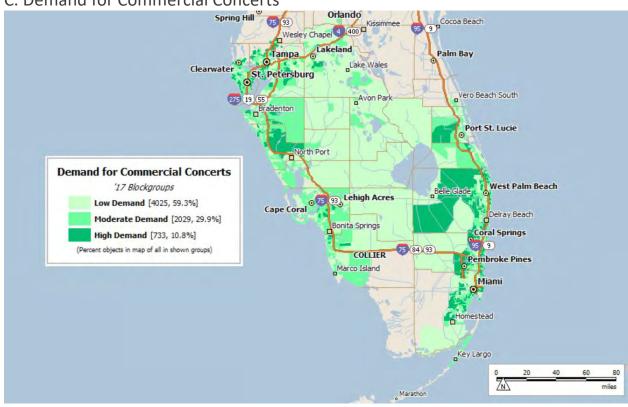

B. Demand for Arts Performances

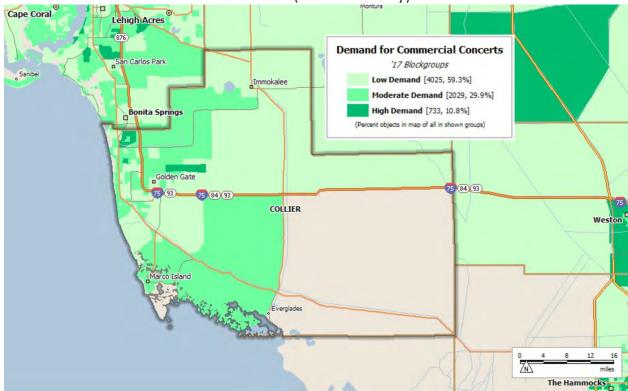

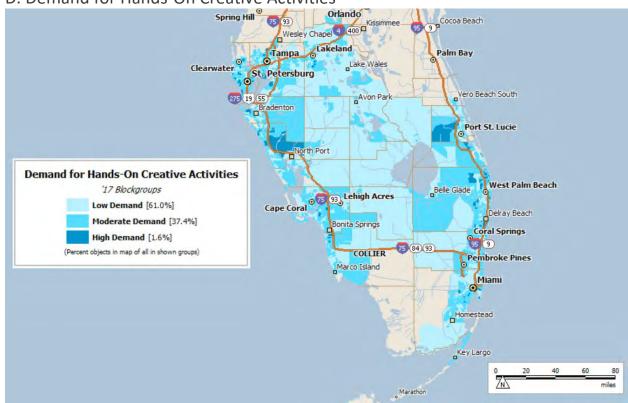

C. Demand for Commercial Concerts

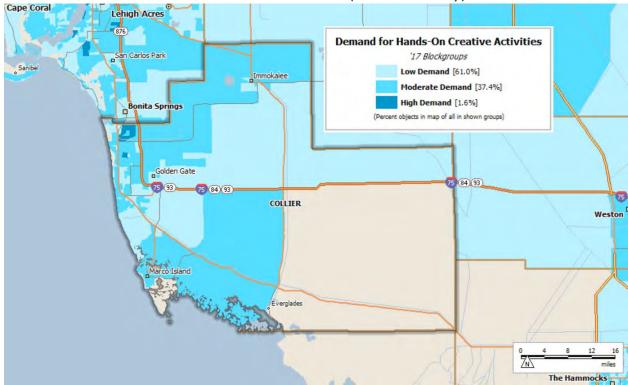

D. Demand for Hands-On Creative Activities

Demographics

The chart below shows a comparison of key 2019³ demographics for the population within the four market areas.

				2019 DEI	MOGRAPHICS			
	Everyday Market		Special Occasion Market		Daytrip Market		Overnight Market

Market Area Household Characteristics (Mosaic USA) & Projected Potential

Household consumer characteristics are expressed in this research as Mosaic USA groups. Mosaic is a consumer lifestyle system by Experian licensed for consultant use. It groups and quantifies households by 19 types and provides an overview of the lifestyle characteristics, including how households index for leisure activities, media use, among other things compared to a national average (100). The chart below reports the percentage of households⁴ represented by each Mosaic group in the four drive-time areas Following the chart is a snapshot description of the household types in the market and aspects that distinguish them, one from the other, with regard to arts and cultural participation.

Mosaic Target Group Descriptions and Strategy

Using a combination of demand, location, specific indexing data, and crossover potential, each Mosaic Group was assigned to a market. Market assignments are highlighted in green. Because of proximity, all of the groups are assumed to be included in the Everyday Market although there are differences in the types of activities these households would be likely to attend, how often, and at what cost. Building on the everyday market is the extended local area named Special Occasion Market which holds the same demand, though is likely to draw visitors and attendees less often due to distance. Expanding further, the groups were then assigned to the daytrip or overnight market, or both based on their profile and characteristics.

	Household Types	Everyday Market		Special Occasion Market		Daytrip Market		Overnight Market

Esri Estimated Potential Buyer Counts

Esri estimates buyer counts⁷ for geographic block groups for the variables included in this analysis. The data below is the sum total of buyer counts which are not mutually exclusive, meaning that a potential buyer may be counted within more than category (e.g. art galleries and museums, within Visual Arts/Museums)

This data was useful for quantifying a large pool of potential buyers in the immediate local area within a 30-minute drive of many of Collier County venues and nearly double that for buyers willing to drive up to an hour. The day trip area that includes over 600,00 potential buyers living between one hour and 90-minutes from downtown Naples. Potential buyers living an hour and half to three hours away produce a total count of over 11 million. Frequency of participation will vary dramatically as distance increases.

ESRI Estimated Potential Buyer	Every Day	Special Ocassion	Day Trip	Overnight
Visual Arts/Museums	75,268	121,963	146,129	2,842,629
Arts Performances	49,061	74,134	88,665	1,678,565
Commercial Concerts	64,490	109,281	134,531	2,602,722
Hands-on Creative Activities	118,909	197,562	245,555	4,587,835
Totals	307,728	502,940	614,880	11,711,751
Charitable Giving	11,272	17,694	22,450	364,364

Programming interests of each target audience are summarized by strength with one dot for "low," two dots for "moderate," and three dots for "high".

Cost threshold is represented by one to five "\$" indicating level of price sensitivity. One "\$" indicates the highest price sensitivity/lowest threshold and five "\$\$\$\$" indicates low sensitivity/high threshold.

Programming examples:

<u>Fine Arts</u>: fine arts performances of music, theatre, opera, dance, museums, high-end galleries, high-end art fairs

<u>Local Culture</u>: craft and other fairs, festivals, creative places, authentic local experiences/destinations, foodways

<u>Crossover</u>: outdoor recreation, nature, wellness
Family Activities: arts and creative cultural activities
designed for children and youth

Estimated Saturation

Consistent and abundant information on audiences counts from Collier County arts and culture organizations was not available to the consultants for this project. Below is an estimated saturation rate for each of the arts/culture variables used for the study. This count is provided by Esri for persons over the age of 25 within the combined markets if "everyday" and "special occasion" as representative of the most realistic local market area from which audiences and visitors come regularly. Using the Census estimates for persons age 25 or older we estimate the saturation or reach into the market area for these various activities in a given year. This does not represent total audience counts, transactions, or visitors. It is the best attempt to reflect the percentage of estimated buyers from the local market within the local market.

	1			
	Combined Everyday/Special			
	Persons Age 25+			
	n=537,862

Collier County Arts and Culture Strategic Plan

Report of Findings

CPS The Cultural Planning Group

Report Content

Introduction
Integrated Research Summary
Collier Today
Collier Tomorrow: The Vision
Collective Community Priorities
Arts and Cultural Sector Priorities
Individual Artist and Creatives Priorities

What we did

Launch: Meeting of the Task Force in June 2019

Engagement: Five (5) months of stakeholder interviews, community discussions and forums

Research: Organizational and resident surveys; asset inventory; cultural vitality index profile; market demand analysis and mapping

Description	Engagement Activity	Timeframe	Overview
Stakeholder Engagement	Individual interviews and group meetings (15 interviews and meetings)	June 2019	Meetings with Task Force, County leadership and staff; community leaders, community tours- Naples, East Naples, Bayshore.
Stakeholder and Community Engagement	Individual interviews; group discussions; roundtables; community town halls (10 interviews/ meetings)	August 2019 (2 visits)	Meetings with community leaders, County leadership, arts organizations, community forum, community tours - Everglades City, Immokalee.
Stakeholder and Community Engagement	Individual interviews; forums, discussion groups (12 meetings)	September 2019	Meetings with Task Force, community and organization leaders, community forums and group discussions with artists, culinary, sports and tourism partners.
Stakeholder Engagement	Telephone interviews Non-profit Cultural Organizational Survey (8 interviews; 28 organizations)	October/November 2019	Interviews with arts organization leaders and TDC members. Cultural Organizational survey completed.
Collier County Residents Survey	Open, online survey for all of County (777completes)	September - November 2019	Open-sourced survey exploring vision, attitudes, preferences for arts programming, personal participation, and community priorities.

What we asked

What is the current state of arts, culture and creativity?

What is working well?

What is missing?

What does Collier look like in the future?

How can we enhance cultural tourism?

How do we get there?

Why we did it

Bring together multiple points of view

Create legitimacy and a sense of shared responsibility

Identify creative assets within communities

Cultivate new partners/allies and collaborations

Stimulate broad awareness and momentum

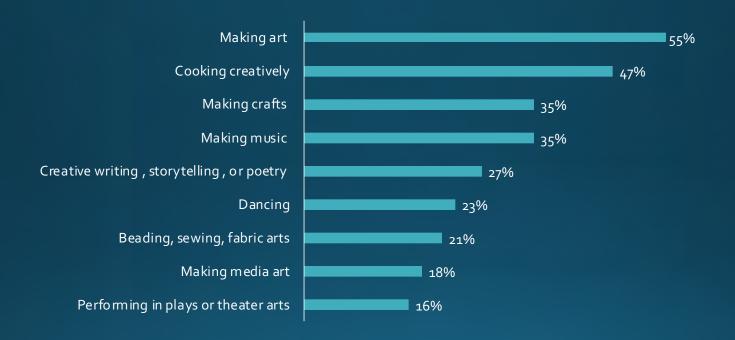

Collier Today

- Unique geography and demography
- Communities with distinct cultures
- An agricultural mecca
- Philanthropic and giving community
- Vast open spaces and scenic nature
- Rich cultural organizations and activities
- Residents and artists participate in creative activities
- Residents enjoy world class music, theater, art, and film
- Numerous opportunities for better connections of communities

Collier Today

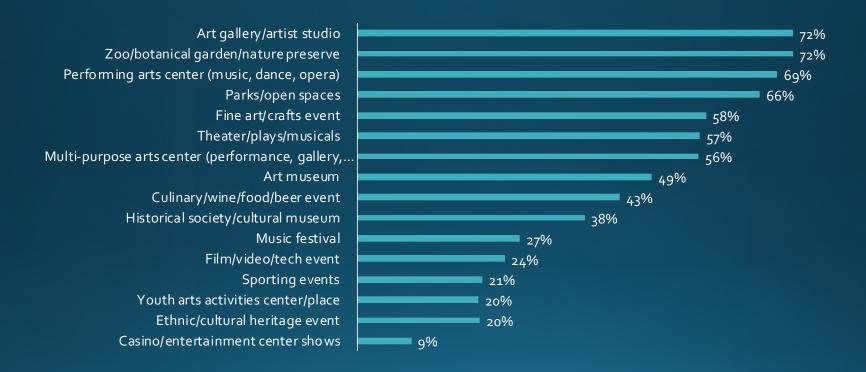

- More traditional than innovative
- Focus is on older generations, less creative activities and opportunity for younger residents
- Brand identity is now "Naples"
- Need for more affordable and accessible opportunities
- Need for more effective arts and cultural activities promotions/communications

Collier Today: What residents do now...

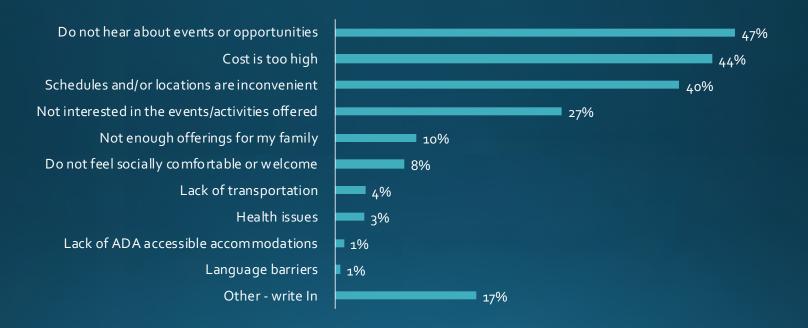

What types of creative activities do you or your family do locally? (Check all that apply.)

Collier Today: Where residents go...

In the last 12 months, which of the following did you attend or visit in Collier County? (Check all that apply.)

Collier Today: What keeps residents from participating...

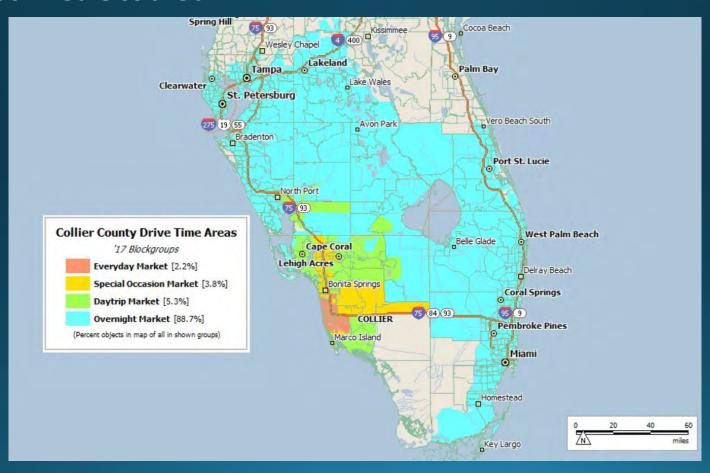

What (if anything) keeps you from attending and/or participating more in creative activities and/or arts and cultural events? Please select all that apply.

Collier Today: How residents rate opportunities

Area	<u>Excellent</u>	<u>Good</u>	<u>Adequate</u>	<u>Fair</u>	<u>Poor</u>
QUALITY of Opportunities	35%	44%	13%	5%	3%
VARIETY of Opportunities	26%	38%	23%	8%	5%
AFFORDABILITY of Opportunities	14%	36%	26%	17%	7%
NUMBER of Opportunities	22%	35%	23%	13%	7%
LOCATION of Opportunities	23%	41%	22%	10%	4%

How do you rate arts and cultural opportunities in Collier County?

Market Area Studied

Collier Today: Arts market demand

The arts market demand is strong.

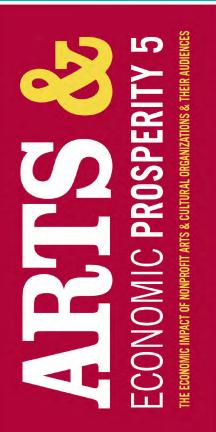

- Highest for less than 10% of the household population.
- Cost and accessibility force most into the moderate and low demand groups.
- Estimated buyer counts in each market area align with survey findings
 - Highest counts from the everyday market to the overnight market being for hands-on creative activities and lowest for arts performances.

Collier Today: Arts market demand

- Market demand is reflective of community priorities.
 - 80% of survey respondents prioritize making the arts more accessible and "providing more and different arts and cultural activities"
- Connectivity to an abundance of arts and cultural opportunities is lacking.
 - Where: Outside of Naples
 - Reasons: lack of marketing, limited exposure, transportation issues, programming and communication within exclusive and niche audience groups
- Historical, heritage, and authentic local experiences are abundant within the county and under-developed within local and cultural visitor marketing investments

Collier Tomorrow: Summary of Vision

- Collier attracts visitors with its unique cultural brand

 fusion of arts, agriculture, sports, nature, culinary,
 and beaches
- Artists and cultural organizations thrive
- Arts and creative hubs exist throughout the community
- Public art is part of the daily lives of residents
- Arts and activities are available for all residents and visitor groups (age, background, etc.) and easily accessible
- Schools provide artistic career pathways
- Arts and creativity relate to health and wellness initiatives and programs
- Arts and cultural sectors are supported by the government
- Communities and culturally-specific groups connect and celebrate Collier's uniqueness – for the benefit of residents and the economy

Arts and Culture is Essential

Want more creative activities and in all communities

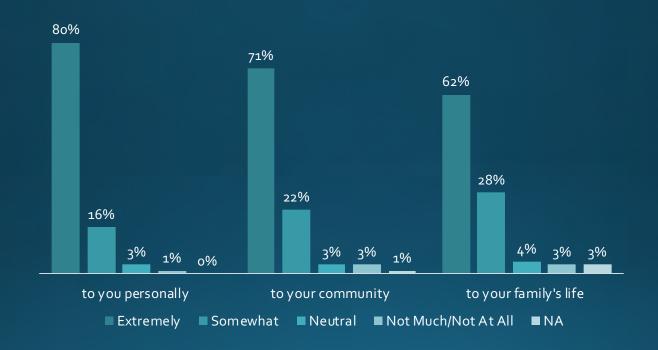

Greater focus on arts and culture from County government

Leverage local history and heritage for residents and visitors

Elevate the arts, cultural, and creative sector

More opportunities for younger residents

Importance of the Arts

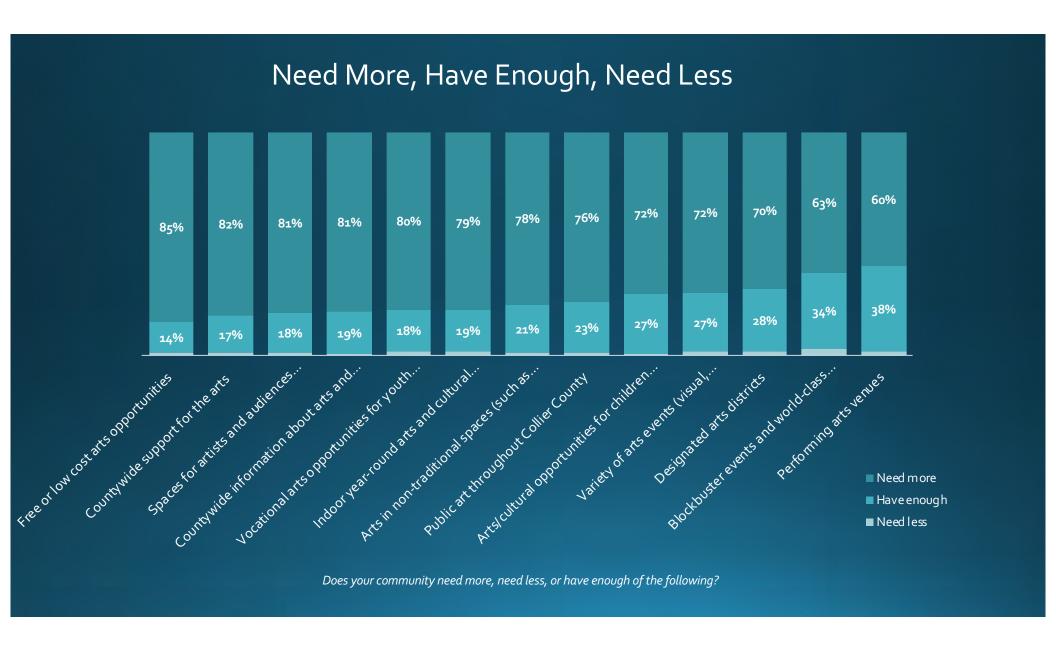

How important are arts and culture to you, your family, and your community?

Top Plan Priorities

Thinking about priorities for the Arts and Culture Strategic Plan, please rate the following.

Solving Community Issues for All

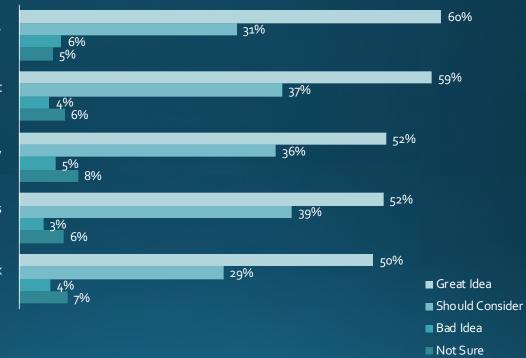

Environmental causes (such as making art from beach clean up)

Health and wellness (such as fitness, mindfulness)

Workforce/jobs development (such as culinary, events management, tech)

Social services (such as homelessness, at-risk youth)

What do you think about the idea of using artists and arts activities to address other local issues such as...?

Opportunity
Snapshot:
Naples
Marco Island
Immokalee
Everglades City
Bayshore
Golden Gate
East Naples

Creating opportunities in **Naples** for younger, diverse residents

Supporting the creation of cultural districts in the **City** and **County**

Encouraging residents and visitors to travel *over the bridge* for Marco Island

Celebrating the agricultural community in **Immokalee** for unique experience for residents and visitors

Leveraging the unique geography and history of **Everglades City** for visitors and residents

Supporting the development of **Bayshore** as one of the arts destinations in Collier

Developing and promoting **Golden Gate and East Naples** cultural activities and places

Cultural Tourism Priorities

- Collier to be appreciated and known as a cultural destination
- Leverage the unique authentic experiences throughout the County
- Create identity for Collier communities through branding and public art
- Imbed arts and culture in County tourism strategy and marketing
- Improve access to funding for cultural tourism marketing efforts
- Work together with other sectors for enhanced, diversity of offerings

Arts and Cultural Organization Priorities

- Shared marketing and audience development
- Cross-sector collaborations outside the arts
- Collaborations and cooperation in the arts and cultural community
- Stronger relationship with CVB, County Museums, Parks & Rec, and school system
- Equitable access to arts programs
- Funding and Board development
- Service organization with the resources to fulfill the role as a cultural headquarters
- Address affordable housing and arts space issues

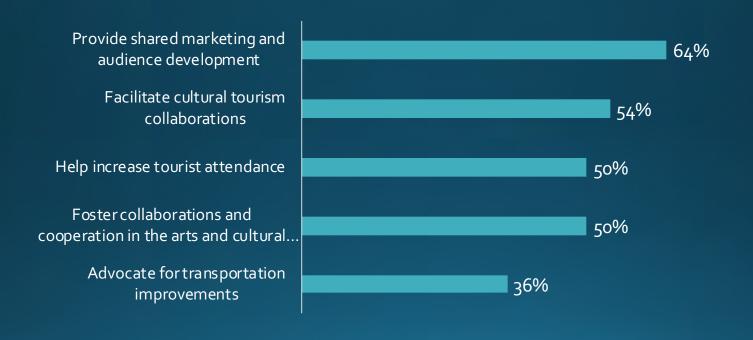

Survey: Participating Organizations

- 10 Multi-Disciplinary Arts
- 2 Music
- **6** Theatre Arts
- **5** Visual Arts
- **5** Other (Art Center, Community Service, Conservation/Nature, Museum, Arts/Faith)
- Employee counts range from 1 150.
- Operating budgets range from less than \$25,000 to over \$2 million.

Path to Stronger Partnership with TDC

Priorities for the Strategic Plan

Greatest Areas of Organizational Need

Additional Needs:

- Affordable housing
- Parking
- Signage

Market Demand Analysis

Estimated buyer counts in all areas from 15-minute to 3 hours are highest for:

- 1. Hands-on creative activities
- 2. Visual arts/museums
- 3. Commercial concerts
- 4. Arts performances

While capture rates will vary dramatically, potential buyer numbers are strong

- Éveryday buyers: 300,00+
- Special occasion buyers: 502,000+
- Day trip buyers: 614,000+
- Overnight buyers: 11.7m+

HIGH DEMAND HOUSEHOLD TYPES

Market Demand Analysis Quantity of high demand among households is less than 10% of any area...

9% of "everyday" market

6% of "special occasion" market

2% of "daytrip" market

9% of "overnight market"

Lifestyles of high demand households are bifurcated – highly affluent, highly educated older adults/boomers AND middle/lower income younger adults without kids

MODERATE DEMAND HOUSEHOLD TYPES

Market Demand Analysis Quantity of moderate demand among households varies by area:

46% of "everyday" market

41% of "special occasion" market

25% of "daytrip" market

25% of "overnight market"

Lifestyles of moderate households are extremely diverse socio-economically, but skew toward older adults and seniors and families with older children (or seasonal visiting grand children)

LOW DEMAND HOUSEHOLD TYPES

Market Demand Analysis area:
45% of "everyday" market
53% of "special occasion" market

Quantity of low demand among households varies by

74% of "daytrip" market

67% of "overnight market"

Lifestyles of low demand households are a bifurcated geographically, with city and rural households dominated by lower income starter families, ethnically diverse families, and seniors on fixed incomes.

Programming interests of each target audience are summarized by strength with one dot for "low," two dots for "moderate," and three dots for "high".

Cost threshold is represented by one to five "\$" indicating level of price sensitivity. One "\$" indicates the highest price sensitivity/lowest threshold and five "\$\$\$\$\$" indicates low sensitivity/high threshold.

Programming examples:

<u>Fine Arts</u>: fine arts performances of music, theatre, opera, dance, museums, highend galleries, high-end art fairs

Local Culture: craft and other fairs, festivals, creative places, authentic local experiences/destinations, foodways

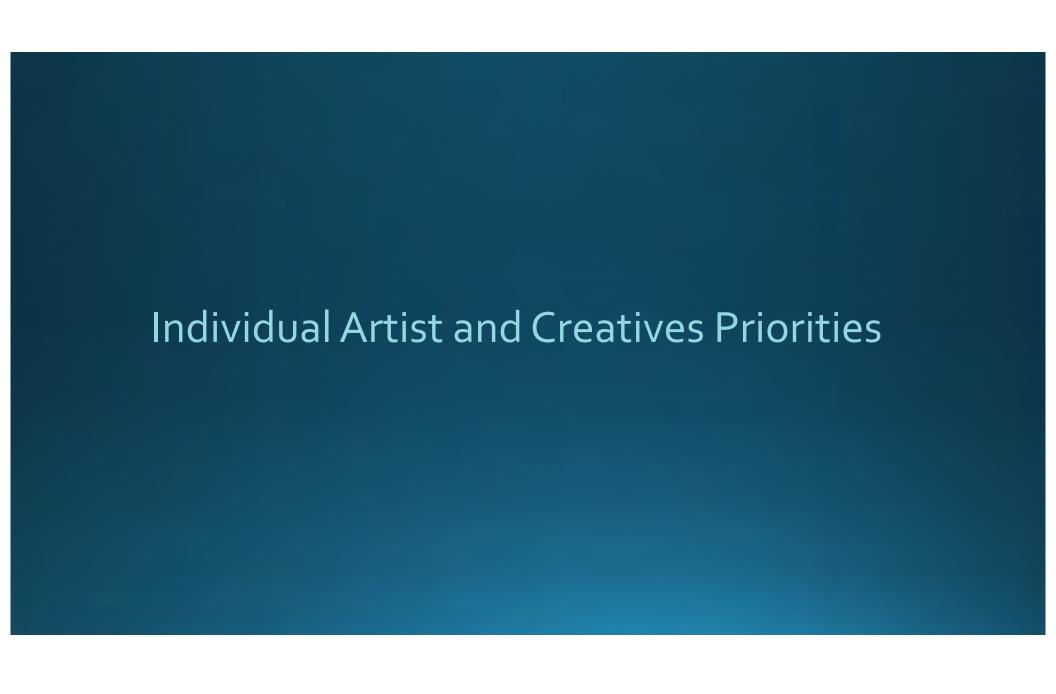

<u>Crossover</u>: outdoor recreation, nature, wellness Family Activities: arts and creative cultural activities designed for children and youth

Artist Priorities

- Recognition and support for role of artists in the community
- More critical dialogue about the arts
- Support for the new and avant garde, beyond mainstream arts offerings
- Affordable live, work, exhibition, and sales spaces
- Cooperative solutions
- More public art!
- Support for existing networks and resources, such as Naples Arts District, Bayshore Arts District, Golden Gate and others.

Creative Economy Analysis

earnings, FDR grants, and Nonprofit revenues.

The foundation for a vibrant creative economy is creative sector industries and occupations. Creative workers (creatives) are individuals with advanced training and experience in the design and production of a broad range of cultural products and services, including many individual artists of all disciplines. The Creative Vitality™ Suite (CVI), a data source generated by WESTAF, provides a portrait of Collier County's creative economy. The CVI measures the creative economic health of an area by integrating economic data from both the for-profit and nonprofit sectors. This approach underscores the economic relationships between the for- and nonprofit sectors and is a

mechanism for diagnosing a region's creative strengths and weaknesses.

According to the 2018 CVI, Collier County scores a .92 on the national index of 1.00. Historically, Collier County trended up from 2014 to 2016. The index slightly increased from a 2017 index of .91 to a 2018 index of .92.

Total sales for Collier County's creative industries were \$1.7 billion in 2018, an increase from \$1.6 billion in 2017. The top ten sectors with the highest industry sales are:

- 1. Full-service restaurants
- 2. Software publishers
- 3. Independent artists, writers, and performers
- 4. Promoters of performing arts, sports, and similar events with facilities
- 5. Internet publishing/broadcasting

- 6. Civic and social organizations
- 7. Interior design services
- 8. Architectural services
- 9. Newspaper publishers
- 10. Zoos and botanical gardens

In 2018, Collier County had 9,245 creative sector jobs⁸ with total creative industry earnings of approximately \$681 million.⁹ Overall, creative earnings and occupations increased between 2017 and 2018, by 7% and 4%, respectively. The top ten creative sector jobs are:

- 1. Photographers
- 2. Writers and authors
- 3. Chefs and head cooks
- 4. Software developers, applications
- 5. Interpreters and translators
- 6. Musicians and singers

- 7. Graphic designers
- 8. Interior designers
- 9. Editors
- 10. Fine artists, including painters, sculptors, and illustrators, cabinetmakers

⁸ Creative sector jobs include four classes of workers: Extended Proprietors, Non-QCEW Employees, QCEW Employees, and Selfemployed. Source: Economic Modeling Specialists International (EMSI).

⁹ Industry earnings data is arrived at by aggregating the compensation paid for the labor of all workers in a given industry.

ARTS & STECONOMIC PROSPERITY 5

THE ECONOMIC IMPACT OF NONPROFIT ARTS & CULTURAL ORGANIZATIONS & THEIR AUDIENCES

CREATING JOBS. GENERATING COMMERCE. DRIVING TOURISM.

in Collier County, FL

Arts and Economic Prosperity® 5 was conducted by Americans for the Arts, the nation's nonprofit organization for advancing the arts in America. Established in 1960, we are dedicated to representing and serving local communities and creating opportunities for every American to participate in and appreciate all forms of the arts.

"Understanding and acknowledging the incredible economic impact of the nonprofit arts and culture, we must always remember their fundamental value. They foster beauty, creativity, originality, and vitality. The arts inspire us, sooth us, provoke us, involve us, and connect us. But they also create jobs and contribute to the economy."

Robert L. Lynch
 President and CEO
 Americans for the Arts

The Arts Mean Business

By Robert L. Lynch, President and CEO, Americans for the Arts

In my travels, I meet business and government leaders who speak passionately about the value the arts bring to their communities—fueling creativity, beautifying downtowns, and providing joy. Many also share with me the challenge of balancing arts funding with the demands to support jobs and grow their economy. To these community leaders, **Arts & Economic Prosperity 5** offers a clear and welcome message: the arts are an investment that delivers both community well-being and economic vitality.

Arts & Economic Prosperity 5 (AEP5) is Americans for the Arts' fifth economic impact study of the nation's nonprofit arts and cultural organizations and their audiences. By every measure, the results are impressive. Nationally, the nonprofit arts industry generated \$166.3 billion of economic activity in 2015—\$63.8 billion in spending by arts and cultural organizations and an additional \$102.5 billion in eventrelated expenditures by their audiences. This activity supported 4.6 million jobs and generated \$27.5 billion in revenue to local, state, and federal governments (a yield well beyond their collective \$5 billion in arts allocations). AEP5 is the most comprehensive study of its kind ever conducted. It provides detailed economic impact findings on 341 study regions representing all 50 states and the District of Columbia. Data was gathered from 14,439 organizations and 212,691 arts event attendees, and our project economists customized input-output models for each and every study region to ensure reliable and actionable localized results.

When Americans for the Arts published its first economic impact study in 1994, it worked with 33 local communities. As evidence of the value of these studies, AEP5 has grown this local participation tenfold. We also have witnessed a corresponding growth in the understanding of the economic value of the arts. The U.S. Bureau of Economic Analysis, for example, now publishes an annual *Arts & Cultural Production Satellite Account*, which extends beyond the nonprofit sector to include the full breadth of commercial and for-profit arts, education, and individual artists, and lists the sector as a \$730 billion industry (4.2 percent of the nation's GDP—a larger share of the economy than

transportation, tourism, agriculture, and construction). As another example, many state and local governments have established agencies to track and grow their creative economy.

What continues to set AEP5 apart from other studies is exactly why it is so useful: it uses localized research that not only focuses on arts organizations—but also incorporates the event-related spending by their audiences. When patrons attend an arts event, they may pay for parking, eat dinner at a restaurant, enjoy dessert after the show, and return home to pay the babysitter. The study found that the typical attendee spends \$31.47 per person, per event beyond the cost of admission. AEP5 also shows that one-third of attendees (34 percent) traveled from outside the county in which the arts event took place. Their event-related spending was more than twice that of their local counterparts (\$47.57 vs. \$23.44). What brought those visitors to town? Twothirds (69 percent) indicated that the primary purpose for their visit was to attend that arts event. The message is clear: a vibrant arts community not only keeps residents and their discretionary spending close to home, it also attracts visitors who spend money and help local businesses thrive.

AEP5 demonstrates that the arts provide both cultural and economic benefits. No longer do community leaders need to feel that a choice must be made between arts funding and economic development.

Arts & Economic Prosperity 5 proves that they can choose both. Nationally as well as locally, the arts mean business.

"Even in a strong economy, some may perceive the arts as an unaffordable luxury. Fortunately, this rigorous report offers evidence that the nonprofit arts industry provides not just cultural benefits to our communities, but also makes significant positive economic contributions to the nation's financial well-being regardless of the overall state of the economy. The arts as a driver of employment, vibrancy, tourism, and building a creative workforce is certainly something to applaud."

Jonathan Spector
 President & CEO
 The Conference Board

The Economic Impact of the Nonprofit Arts and Culture Industry in Collier County

Arts & Economic Prosperity 5 provides evidence that the nonprofit arts and culture sector is a significant industry in Collier County—one that generates \$107.7 million in total economic activity. This spending—\$63 million by nonprofit arts and cultural organizations and an additional \$44.7 million in event-related spending by their audiences—supports 2,923 full-time equivalent jobs, generates \$57.4 million in household income to local residents, and delivers \$10.8 million in local and state government revenue. This economic impact study sends a strong signal that when we support the arts, we not only enhance our quality of life, but we also invest in Collier County's economic well-being.

This Arts & Economic Prosperity 5 study documents the economic impact of the nonprofit arts and culture sector in 341 study regions—113 cities, 115 counties, 81 multicity or multicounty regions, 20 states, and 12 arts districts—representing all 50 U.S. states and the District of Columbia. The diverse study regions range in population (1,500 to four million) and type (rural to large urban). Economists customized input-output models to calculate specific and reliable findings for each study region. This study focuses solely on the economic impact of nonprofit arts and cultural organizations and event-related spending by their audiences. Spending by individual artists and the forprofit arts and culture sector (e.g., Broadway or the motion picture industry) are excluded from this study.

The geographic area analyzed in this unique report is defined as **Collier County**, **Florida**.

Defining Economic Impact

This proprietary study methodology uses four economic measures to define economic impact: full-time equivalent jobs, resident household income, and local and state government revenues.

Full-Time Equivalent (FTE) Jobs describes the total amount of labor employed. An FTE job can be one full-time employee, two half-time employees, etc. Economists measure FTE jobs, not the total number of employees, because it is a more accurate measure that accounts for part-time employment.

Resident Household Income (often called Personal Income) includes salaries, wages, and entrepreneurial income paid to residents. It is the money residents earn and use to pay for food, shelter, utilities, and other living expenses.

Revenue to Local and State Government includes revenue from local and state taxes (e.g., income, sales, lodging, real estate, personal property, and other local option taxes) as well as funds from license fees, utility fees, filing fees, and other similar sources. Local government revenue includes funds to governmental units such as city, county, township, and school districts, and other special districts.

Economic Impact of Spending by the Nonprofit Arts and Culture Industry (Combined Spending by Both Organizations and Their Audiences) in Collier County

In communities coast-to-coast, from our smallest towns to our largest cities, America's 100,000 nonprofit arts and cultural organizations make their communities more desirable places to live and work every day of the year.

The arts and culture provide inspiration and joy to residents, beautify public spaces, and strengthen the social fabric of our communities. Nonprofit arts and cultural organizations are also businesses. They employ people locally, purchase goods and services from other local businesses, and attract tourists. Event-related spending by arts audiences generates valuable revenue for local merchants such as restaurants, retail stores, parking garages, and hotels.

During fiscal year 2015, spending by both Collier County's nonprofit arts and cultural organizations and their audiences totaled \$107.7 million. The table below demonstrates the total economic impact of these expenditures.

TABLE 1: Total Economic Impact of the Nonprofit Arts and Culture Industry in Collier County (Combined Spending by Nonprofit Arts and Cultural Organizations and Their Audiences)

	Collier County	Median of Similar Study Regions Pop. = 250,000 to 499,999	National Median

The Arts Improve the Economy ... and the Quality of our Personal Lives

- ✓ 82 percent of Americans believe the arts & culture are important to local businesses and the economy
- ✓ 87 percent of Americans believe the arts & culture are important to quality of life

Source: Americans for the Arts' 2016 survey of 3,020 adults by Ipsos Public Affairs

"The success of my family's business depends on finding and cultivating a creative and innovative workforce. I have witnessed firsthand the power of the arts in building these business skills. When we participate personally in the arts, we strengthen our 'creativity muscles,' which makes us not just a better ceramicist or chorus member, but a more creative worker—better able to identify challenges and innovative business solutions."

— Christopher Forbes, Vice Chairman, Forbes, Inc.

Economic Impact: Total, Direct, Indirect, and Induced

How can a dollar be *respent*? Consider the example of a theater company that purchases a five-gallon bucket of paint from its local hardware store for \$100—a very simple transaction at the outset, but one that initiates a complex sequence of income and spending by both individuals and other businesses.

Following the paint purchase, the hardware store may use a portion of the \$100 to pay the sales clerk who sold the bucket of paint. The sales clerk then respends some of the money for groceries; the grocery store uses some of the money to pay its cashier; the cashier then spends some of the money for rent; and so on.

The hardware store also uses some of the \$100 to purchase goods and services from other businesses, such as the local utility company, and then to buy a new bucket of paint from the paint factory to restock its shelf. Those businesses, in turn, respend the money they earned from the hardware store to buy goods and services from still other local businesses, and so on.

Eventually, the last of the \$100 is spent outside of the community and no longer has a local economic impact. It is considered to have leaked out of the community.

The **total** economic impact describes this full economic effect, starting with the theater's initial paint purchase and ending when the last of the \$100 leaks out of the community. It is composed of the **direct** economic impact (the effect of the initial expenditure by the theater), as well as the **indirect** and **induced** economic impacts, which are the effects of the subsequent rounds of spending by businesses and individuals, respectively.

Interestingly, a dollar ripples very differently through each community, which is why an input-output model was customized for the unique economy of Collier County.

Economic Impact of Spending by Nonprofit Arts and Cultural ORGANIZATIONS in Collier County

Nonprofit arts and culture organizations are active contributors to their business community. They are employers, producers, and consumers. They are members of the Chamber of Commerce as well as key partners in the marketing and promotion of their cities, regions, and states. **Spending by nonprofit arts and cultural organizations totaled \$63 million in Collier County during fiscal year 2015**. This spending is far-reaching: organizations pay employees, purchase supplies, contract for services, and acquire assets within their community. These actions, in turn, support jobs, generate household income, and generate revenue to local and state governments.

Collier County's nonprofit arts and cultural organizations provide rewarding employment for more than just administrators, artists, curators, choreographers, and musicians. They also employ financial staff, facility managers, and salespeople. In addition, the spending by these organizations directly supports a wide array of other occupations spanning many industries that provide their goods and services (e.g., accounting, construction, event planning, legal, logistics, printing, and technology).

Data were collected from 45 eligible nonprofit arts and cultural organizations that are located in Collier County. Each provided detailed budget information for fiscal year 2015 (e.g., labor, payments to local and nonlocal artists, operations, administration, programming, facilities, and capital expenditures/asset acquisition). The following table demonstrates the total economic impact of their aggregate spending.

TABLE 2: Total Economic Impact of Spending by Nonprofit Arts and Cultural ORGANIZATIONS in Collier County				
	Collier County	Median of Similar Study Regions Pop. = 250,000 to 499,999	National Median	
Total Organizational Expenditures	\$62,973,722	\$32,930,341	\$15,727,535	
Full-Time Equivalent Jobs	2,011	1,115	608	
Resident Household Income	\$40,879,000	\$23,272,000	\$11,441,500	
Local Government Revenue	\$2,305,000	\$1,292,500	\$592,000	
State Government Revenue	\$4,528,000	\$1,648,000	\$840,500	

Economic Impact Beyond Dollars: Volunteerism

While arts volunteers may not have an economic impact as defined in this study, they clearly have an enormous impact by helping nonprofit arts and cultural organizations function as a viable industry. Arts & Economic Prosperity 5 reveals a significant contribution to nonprofit arts and cultural organizations as a result of volunteerism. During 2015, a total of 4,530 volunteers donated a total of 221,378 hours to Collier County's participating nonprofit arts and cultural organizations. This represents a donation of time with an estimated aggregate value of \$5,215,666 (Independent Sector estimates the dollar value of the average 2015 volunteer hour to be \$23.56). Volunteers can include unpaid professional staff (e.g., executive and program staff, board/commission members), artistic volunteers (e.g., artists, choreographers, designers), clerical volunteers, and service volunteers (e.g., ticket takers, docents, ushers, gift shop volunteers).

The 45 participating organizations reported an average of 100.7 volunteers who volunteered an average of 48.9 hours during 2015, for a total of 4,919.5 hours per organization.

The Value of In-Kind Contributions to Arts Organizations

The organizations were asked about the sources and value of their in-kind support. In-kind contributions are non-cash donations such as materials (e.g., office supplies from a local retailer), facilities (e.g., office or performance space), and services (e.g., printing from a local printer). The 45 participating nonprofit arts and cultural organizations in Collier County reported that they received in-kind contributions with an aggregate value of \$717,640 during fiscal year 2015. These contributions can be received from a variety of sources including corporations, individuals, local and state arts agencies, and government agencies.

"Investments in arts and culture enhance the quality of life, the third-highest measurement businesses use when gauging development trends—behind skilled labor and highway accessibility but ahead of other factors such as corporate tax rates and incentives. These investments are breathing new life into our downtown areas, creating educational opportunities, and attracting businesses and highly skilled workers to Iowa. Today, nearly 6,000 arts organizations employ 23,000 people in Iowa, and that number jumps to 73,000 when all creative fields are counted. In all, that's about four percent of our workforce."

— Governor Kim Reynolds, Iowa

Economic Impact of Spending by Nonprofit Arts and Cultural AUDIENCES in Collier County

The nonprofit arts and culture industry, unlike most industries, leverages a significant amount of event-related spending by its audiences. For example, when patrons attend a cultural event, they may pay to park their car, purchase dinner at a restaurant, shop in nearby stores, eat dessert after the show, and pay a babysitter upon their return home. Attendees from out of town often spend the night in a hotel. This spending generates related commerce for local businesses such as restaurants, parking garages, retail stores, and hotels. Local businesses that cater to arts and culture audiences reap the rewards of this economic activity.

To measure the impact of spending by cultural audiences in Collier County, data were collected from 748 event attendees during 2016. Researchers used an audience-intercept methodology, a standard technique in which patrons are asked to complete a short survey about their event-related spending (while they are attending the event). In Collier County, cultural attendees spent an average of \$32.30 per person, per event as a direct result of their attendance at the event.

The 45 participating nonprofit arts and cultural organizations reported that the aggregate attendance to their events was 1.4 million during 2015. Event-related spending by these attendees totaled \$44.7 million in Collier County during fiscal year 2015, excluding the cost of event admission. The following table demonstrates the total economic impact of this spending.

TABLE 3:
Total Economic Impact of Spending by Nonprofit Arts and Cultural AUDIENCES
in Collier County (excluding the cost of event admission ¹)

	Collier County	Median of Similar Study Regions <i>Pop. 250,000 to 499,999</i>	National Median
Total Audience Expenditures	\$44,713,126	\$46,521,468	\$18,871,511
Full-Time Equivalent Jobs	912	1,250	430
Resident Household Income	\$16,520,000	\$2,405,000	\$8,402,500
Local Government Revenue	\$1,255,000	\$2,405,000	\$898,000
State Government Revenue	\$2,665,000	\$2,523,500	\$1,007,500

Why exclude the cost of admission? The admissions paid by attendees are excluded from the audience analysis because those dollars are captured in the operating budgets of the participating nonprofit arts and cultural organizations and, in turn, are spent by the organizations. This methodology avoids "double-counting" those dollars in the study analysis.

Cultural Tourists Spend More

The 748 audience survey respondents were asked to provide the ZIP code of their primary residence, enabling researchers to determine which attendees were local residents (live within Collier County) and which were nonresidents (live outside Collier County). In Collier County, researchers estimate that 61.2 percent of the 1.4 million nonprofit arts attendees were residents; 38.8 percent were nonresidents.

Nonresident attendees spent an average of 46 percent more per person than local attendees (\$40.05 vs. \$27.39) as a result of their attendance to cultural events. As would be expected from a traveler, higher spending was typically found in the categories of lodging, meals, and transportation. When a community attracts cultural tourists, it harnesses significant economic rewards.

TABLE 4: Event-Related Spending by Arts and Culture Event Attendees Totaled \$44.7 million in Collier County (excluding the cost of event admission)				
	Residents	Nonresidents	All Collier County Event Attendees	
Total Attendance	847,141	537,077	1,384,218	
Percent of Attendees	61.2%	38.8%	100%	
Average Dollars Spent Per Attendee	\$27.39	\$40.05	\$32.30	
Total Event-Related Expenditures	\$23,203,192	\$21,509,934	\$44,713,126	

TABLE 5: Nonprofit Arts and Culture Event Attendees Spend an Average of \$32.30 Per Person in Collier County (excluding the cost of event admission)				
	Residents	Nonresidents	All Collier County Event Attendees	
Refreshments/Snacks During Event	\$3.95	\$4.28	\$4.08	
Meals Before/After Event	\$14.09	\$16.29	\$14.94	
Souvenirs and Gifts	\$3.22	\$5.93	\$4.27	
Clothing and Accessories	\$3.17	\$2.73	\$3.00	
Ground Transportation	\$2.14	\$3.17	\$2.54	
Event-Related Child Care	\$0.20	\$0.12	\$0.17	
Overnight Lodging (one night only)	\$0.62	\$6.91	\$3.06	
Other	\$0.00	\$0.62	\$0.24	
Total Per Person Spending	\$27.39	\$40.05	\$32.30	

The Arts Drive Tourism

Each of the nonresident survey respondents (i.e., those who live outside Collier County) were asked about the purpose of their trip: 61.7 percent indicated that the primary purpose of their visit to Collier County was "specifically to attend this arts/cultural event." This finding demonstrates the power of the arts to attract visitors to the community.

The audience-intercept survey also asked nonresident attendees if they would have traveled somewhere else (instead of to Collier County) if the event where they were surveyed had not occurred: 41.4 percent of nonresident attendees would have "traveled to a different community to attend a similar cultural event."

Of the 38.8 percent of arts attendees who are nonresidents, 6.6 percent reported an overnight lodging expense. Not surprisingly, nonresident attendees with overnight expenses spent considerably more money per person during their visit to Collier County than did nonresident attendees without overnight lodging expenses (\$183.37 and \$30.01, respectively). For this analysis, only one night of lodging expenses is counted toward the audience expenditure, regardless of how many nights these cultural tourists actually stayed in the community. This conservative approach ensures that the audience-spending figures are not inflated by non-arts-related spending.

The Arts Retain Local Dollars

The survey also asked local resident attendees about what they would have done if the arts event that they were attending was not taking place: 43.2 percent of resident attendees said they would have "traveled to a different community to attend a similar cultural event."

The cultural tourism findings on this page demonstrate the economic impact of the nonprofit arts and culture industry in its truest sense. If a community fails to provide a variety of artistic and cultural experiences, not only will it fail to attract new dollars from cultural tourists, it will also lose the discretionary spending of its own residents who will travel elsewhere for a similar experience.

"As a banker, I have visited businesses in almost every city and town in my state. There is a visible difference in places with a vibrant arts community. I see people looking for places to park, stores staying open late, and restaurants packed with diners. The business day is extended and the cash registers are ringing!"

Ken Fergeson, Chairman, NBC Oklahoma
 Past President, American Bankers Association

Travel Party and Demographic Characteristics of Arts Attendees

The tables below list the audience-intercept survey findings related to travel party size as well as the age, educational attainment, and household income reported by the survey respondents.

	Residents	Nonresidents
Travel Party Size		
Average number of adults (18 years or older)	2.3	2.4
Average number of children (younger than 18)	0.2	0.1
Average travel party size	2.5	2.5
Trip Characteristics		
Average number of nights spent away from home as a result of arts event	0.1	1.1
Percentage with any nights spent away from home as a result of arts event	3.3%	28.3%
Percentage attending the arts event or facility (where they were surveyed) for the first time	20.9%	46.5%
Age of Cultural Attendees		
18-34	9.8%	10.4%
35-44	4.0%	7.5%
45-54	10.5%	11.1%
55-64	17.6%	19.6%
65 or Older	58.1%	51.4%
Educational Attainment of Cultural Attendees		
Less than high school	0.9%	0.0%
High school	7.8%	8.7%
2-year college/technical/associates degree	15.6%	12.4%
4-year college/bachelors degree	34.4%	35.6%
Masters degree	32.3%	32.4%
Doctoral degree	8.9%	10.9%
Annual Household Income of Cultural Attendees		
Less than \$40,000	9.0%	7.4%
\$40,000 to \$59,999	10.9%	7.4%
\$60,000 to \$79,999	12.0%	15.3%
\$80,000 to \$99,999	13.6%	13.2%
\$100,000 to \$119,999	15.2%	12.0%
\$120,000 or More	39.4%	44.6%
Civia Engagament of Cultural Attendage		
Civic Engagement of Cultural Attendees Percentage that voted in 2016 U.S. presidential election	87.6%	86.7%

"Mayors understand the connection between the arts industry and city revenues. Arts activity creates thousands of direct and indirect jobs and generates billions in government and business revenues. The arts also make our cities destinations for tourists, help attract and retain businesses, and play an important role in the economic revitalization of cities and the vibrancy of our neighborhoods."

Oklahoma City Mayor Mick Cornett
 President, The United States Conference of Mayors

Conclusion

The nonprofit arts and culture sector is a \$107.7 million industry in Collier County—one that supports 2,923 full-time equivalent jobs and generates \$10.8 million in local and state government revenue.

Nonprofit arts and cultural organizations are businesses in their own right. They spent \$63 million during fical year 2015 to employ people locally, purchase goods and services from local establishments, and attract tourists. They also leveraged a remarkable \$44.7 million in additional spending by cultural audiences—spending that pumps vital revenue into restaurants, hotels, retail stores, parking garages, and other local businesses.

This study puts to rest a misconception that communities support arts and culture at the expense of local economic development. In fact, communities that support the arts and culture are investing in an industry that supports jobs, generates government revenue, and is the cornerstone of tourism. This Arts & Economic Prosperity 5 study shows conclusively that **the arts mean business in Collier County!**

"A vital component to generating economic growth in our communities can be attributed to supporting and funding the arts. It is apparent that decreased support of the arts has negatively impacted some areas of our country. To compete and thrive in today's workforce environment it is apparent that supporting the arts helps foster a more creative and innovative workforce that strengthens our economy."

Nevada Assemblywoman Maggie Carlton
 Co-Chair, National Conference of State Legislatures
 Labor & Economic Development Committee

The Arts & Economic Prosperity 5 Calculator

To make it easier to compare the economic impacts of different organizations within Collier County (or to calculate updated estimates in the immediate years ahead), the project researchers calculated the economic impact per \$100,000 of direct spending by nonprofit arts and cultural organizations and their audiences.

Economic Impact Per \$100,000 of Direct Spending by ORGANIZATIONS

For every \$100,000 in direct spending by a nonprofit arts and cultural organization in Collier County, there was the following total economic impact.

TABLE 7: Ratios of Economic Impact Per \$100,000 of Direct Spending by Nonprofit Arts and Cultural Organizations in Collier County					
	Collier County	Median of Similar Study Regions Pop. = 250,000 to 499,999	National Median		
Full-Time Equivalent Jobs	3.19	3.69	3.52		
Resident Household Income	\$64,914	\$79,015	\$74,554		
Local Government Revenue	\$3,660	\$3,698	\$3,563		
State Government Revenue	\$7,190	\$5,054	\$4,891		

An Example of How to Use the Organizational Spending Calculator Table (above):

An administrator from a nonprofit arts and cultural organization that has total expenditures of \$250,000 wants to determine the organization's total economic impact on full-time equivalent (FTE) employment in Collier County. The administrator would:

- 1. Determine the amount spent by the nonprofit arts and cultural organization;
- 2. Divide the total expenditure by 100,000; and
- 3. Multiply that figure by the FTE employment ratio per \$100,000 for Collier County.

Thus, \$250,000 divided by 100,000 equals 2.5; 2.5 times 3.19 (from the top row of data on Table 1 above) equals a total of 8.0 full-time equivalent jobs supported (both directly and indirectly) within Collier County by that nonprofit arts and cultural organization. Using the same procedure, the estimate can be calculated for resident household income as well as for local and state government revenue.

Economic Impact Per \$100,000 of Direct Spending by AUDIENCES

The economic impact of event-related spending by arts audiences can also be derived for an individual organization or groups of organizations in Collier County.

The first step is to determine the total estimated event-related spending by attendees who are residents of Collier County. To derive this figure, first multiply the total attendance by the percentage of attendees that are residents. Then, multiply the result by the average per person event-related expenditure by resident attendees. The result is the total estimated event-related spending by resident attendees.

The second step is to do the same for nonresidents of Collier County. To derive this figure, first multiply the total attendance by the percentage of attendees that are nonresidents. Then, multiply the result by the average per person event-related expenditure by nonresident attendees. The result is the total estimated event-related spending by nonresident attendees.

Then, add the results from the first two steps together to calculate the total estimated event-related audience spending. Finally, the ratios of economic impact per \$100,000 in direct spending can then be used to determine the total economic impact of the total estimated audience spending.

TABLE 8: Audience Spending Ratios for the Arts & Economic Prosperity 5 Calculator in Collier County (excluding the cost of event admission)					
	Residents	Nonresidents			
Percent of Attendees	61.2%	38.8%			
Average Per Person Event-Related Expenditures	\$27.39	\$40.05			

TABLE 9: Ratios of Economic Impact Per \$100,000 of Direct Spending by Nonprofit Arts and Culture <u>Audiences</u> in Collier County					
	Collier County	Median of Similar Study Regions Pop. = 250,000 to 499,999	National Median		
Full-Time Equivalent Jobs	2.04	2.78	2.46		
Resident Household Income	\$36,947	\$56,692	\$52,101		
Local Government Revenue	\$2,807	\$4,420	\$4,449		
State Government Revenue	\$5,960	\$6,197	\$5,692		

An Example of How to Use the Audience Spending Calculator Tables (on the preceding page):

An administrator wants to determine the total economic impact of the 25,000 total attendees to his/her organization's nonprofit arts and cultural events on full-time equivalent (FTE) employment in Collier County. The administrator would:

- 1. Multiply the total attendance by the percentage of attendees that are residents;
- 2. Multiply the result of step 1 by the average per person event-related expenditure for residents;
- 3. Multiply the total attendance by the percentage of attendees that are nonresidents;
- 4. Multiply the result of step 3 by the average per person event-related expenditure for nonresidents;
- 5. Sum the results of steps 2 and 4 to calculate the total estimated event-related audience spending;
- 6. Divide the resulting total estimated audience spending by 100,000; and
- 7. Multiply that figure by the FTE employment ratio per \$100,000 for Collier County.

Thus, 25,000 times 61.2% (from Table 8 on the preceding page) equals 15,300; 15,300 times \$27.39 (from Table 8) equals \$419,067; 25,000 times 38.8% (from Table 8) equals 9,700; 9,700 times \$40.05 equals \$388,485; \$419,067 plus \$388,485 equals \$807,552, \$807,552 divided by 100,000 equals 8.08; 8.08 times 2.04 (from the top row of data on Table 9 on the preceding page) equals a total of 16.5 full-time equivalent jobs supported (both directly and indirectly) within Collier County by that nonprofit arts and cultural organization. Using the same procedure, the estimate can be calculated for resident household income as well as for local and state government revenue.

Making Comparisons with Similar Study Regions

For the purpose of this analysis and unique report, the geographic region being studied is defined as Collier County, Florida. According to the most recent data available from the U.S. Census Bureau, the population of Collier County was estimated to be 348,777 during 2015. For comparison purposes, 458 pages of detailed data tables containing the study results for all 341 participating study regions are located in Appendix B of the National Statistical Report. The data tables are stratified by population, making it easy to compare the findings for Collier County to the findings for similarly populated study regions (as well as any other participating study regions that are considered valid comparison cohorts).

The National Summary Report and National Brochure are available both by download (free) and hardcopy (for purchase). The National Statistical Report (more than 500 pages in length) is available by download only. All documents and resources can be found at www.AmericansForTheArts.org/EconomicImpact.

"In Rhode Island, we know cultural excellence is crucial to economic development and the success of businesses large and small. Arts-related industries create jobs, attract investments, and enhance tourism—the economic impact of arts organizations is significant. The arts also play a role in promoting the health and welfare of our military members which makes our communities and our state stronger."

 Rhode Island Lieutenant Governor Dan McKee Chair, National Lt. Governors Association

About This Study

This Arts & Economic Prosperity 5 study was conducted by Americans for the Arts to document the economic impact of the nonprofit arts and culture industry in 341 communities and regions (113 cities, 115 counties, 81 multi-city or multi-county regions, 20 states, and 12 individual arts districts)—representing all 50 U.S. states and the District of Columbia.

The diverse local communities range in population (1,500 to four million) and type (rural to urban). The study focuses solely on nonprofit arts and cultural organizations and their audiences. The study excludes spending by individual artists and the for-profit arts and entertainment sector (e.g., Broadway or the motion picture industry). Detailed expenditure data were collected from 14,439 arts and culture organizations and 212,691 of their attendees. The project economists, from the Georgia Institute of Technology, customized inputoutput economic models for each participating study region to provide specific and reliable economic impact data about their nonprofit arts and culture industry: full-time equivalent jobs, household income, and local and state government revenue.

The 250 Local, Regional, and Statewide Study Partners

Americans for the Arts published a Call for Participants in 2015 seeking communities interested in participating in the Arts & Economic Prosperity 5 study. Of the more than 300 potential partners that expressed interest, 250 local, regional, and statewide organizations agreed to participate and complete four participation criteria: identify and code the universe of nonprofit arts and cultural organizations in their study region; assist researchers with the collection of detailed financial and attendance data from those organizations; conduct audience-intercept surveys at cultural events; and pay a modest cost-sharing fee (no community was refused participation for an

inability to pay). Thirty of the 250 partners included multiple study regions as part of their AEP5 participation (e.g., a county as well as a specific city located within the county). As a result, the 250 local, regional, and statewide organizations represent a total of 341 participating study regions.

The United Arts Council of Collier County responded to the 2015 Call for Participants, and agreed to complete the required participation criteria.

Surveys of Nonprofit Arts and Cultural ORGANIZATIONS

Each of the 250 study partners identified the universe of nonprofit arts and cultural organizations that are located in their region(s) using the Urban Institute's National Taxonomy of Exempt Entity (NTEE) coding system as a guideline. The NTEE system—developed by the National Center for Charitable Statistics at the Urban Institute—is a definitive classification system for nonprofit organizations recognized as tax exempt by the Internal Revenue Code. This system divides the entire universe of nonprofit organizations into 10 Major categories, including "Arts, Culture, and Humanities." The Urban Institute reports that approximately 100,000 nonprofit arts and cultural organizations were registered with the IRS in 2015.

The following NTEE "Arts, Culture, and Humanities" subcategories were included in this study:

- A01 Alliances and Advocacy
- A02 Management and Technical Assistance
- A03 Professional Societies and Associations
- A05 Research Institutes and Public Policy Analysis
- A11 Single Organization Support
- A12 Fund Raising and Fund Distribution
- A19 Support (not elsewhere classified)
- A20 Arts and Culture (general)
- A23 Cultural and Ethnic Awareness
- A24 Folk Arts
- A25 Arts Education
- A26 Arts and Humanities Councils and Agencies
- A27 Community Celebrations
- A30 Media and Communications (general)
- A31 Film and Video
- A32 Television
- A33 Printing and Publishing
- A34 Radio
- A40 Visual Arts (general)
- A50 Museums (general)
- A51 Art Museums
- A52 Children's Museums
- A53 Folk Arts Museums
- A54 History Museums
- A56 Natural History and Natural Science Museums
- A57 Science and Technology Museums
- A60 Performing Arts (general)
- A61 Performing Arts Centers
- A62 Dance
- A63 Ballet
- A65 Theatre
- A68 Music
- A69 Symphony Orchestras
- A6A Opera
- A6B Singing and Choral Groups
- A6C Bands and Ensembles
- A6E Performing Arts Schools
- A70 Humanities (general)
- A80 Historical Organizations (general)
- A82 Historical Societies and Historic Preservation
- A84 Commemorative Events
- A90 Arts Services (general)
- A99 Arts, Culture, and Humanities (miscellaneous)

In addition to the organization types listed above, the study partners were encouraged to include other types of eligible organizations if they play a substantial role in the cultural life of the community or if their primary purpose is to promote participation in, appreciation for, and understanding of the visual, performing, folk, literary arts, and/or media arts. These include government-owned and governmentoperated cultural facilities and institutions, municipal arts agencies and councils, private community arts organizations, unincorporated arts groups, living collections (such as zoos, aquariums, and botanical gardens), university presenters and cultural facilities, and arts programs that are embedded under the umbrella of a nonarts organization or facility (such as a community center or church). In short, if it displays the characteristics of a nonprofit arts and cultural organization, it is included. With rare exception, forprofit businesses and individual artists are excluded from this study.

To collect the required financial and attendance information from eligible organizations, researchers implemented a multipronged data collection process. Americans for the Arts partnered with DataArts to collect detailed budget and attendance information about each organization's fiscal year that ended in 2015. DataArts' Cultural Data Profile (CDP) is a unique system that enables arts and cultural organizations to enter financial, programmatic, and operational data into a standardized online form. To reduce the survey response burden on participating organizations, and because the CDP collects the detailed information required for this economic impact analysis, researchers used confidential CDP data as the primary organizational data collection mechanism for the Arts & Economic Prosperity 5 study. This primary data collection effort was supplemented with an abbreviated one-page paper version of the survey that was administered to organizations that did not respond to the CDP survey.

Nationally, information was collected from 14,439 eligible organizations about their fiscal year 2015 expenditures, event attendance, in-kind contributions, and volunteerism. Responding organizations had

budgets ranging from \$0 to \$785 million (Smithsonian Institution). Response rates for the 341 communities ranged from 9.5 percent to 100 percent and averaged 54.0 percent. It is important to note that each study region's results are based solely on the actual survey data collected. No estimates have been made to account for nonparticipating eligible organizations. Therefore, the less-than-100 percent response rates suggest an understatement of the economic impact findings in most of the individual study regions.

In Collier County, 45 of the 182 eligible nonprofit arts and cultural organizations identified by the United Arts Council of Collier County participated in this study—a participation rate of 24.7 percent

Surveys of Nonprofit Arts and Cultural AUDIENCES

Audience-intercept surveying, a common and accepted research method, was conducted in all 341 of the study regions to measure event-related spending by nonprofit arts and culture audiences. Patrons were asked to complete a short survey while attending an event. Nationally, a total of 212,691 attendees completed a valid survey. The randomly selected respondents provided itemized expenditure data on attendance-related activities such as meals, retail shopping (e.g., gifts and souvenirs), local transportation, and lodging. Data were collected throughout 2016 (to account for seasonality) as well as at a broad range of both paid and free events (a night at the opera will typically yield more audience spending than a weekend children's theater production or a free community music festival, for example). The survey respondents provided information about the entire party with whom they were attending the event. With an overall average travel party size of 2.56 people, these data actually represent the spending patterns of more than 544,489 cultural attendees.

In Collier County, a total of 748 valid audienceintercept surveys were collected from attendees to arts and cultural performances, events, and exhibits during 2016.

Economic Analysis

A common theory of community growth is that an area must export goods and services if it is to prosper economically. This theory is called economic-base theory, and it depends on dividing the economy into two sectors: the export sector and the local sector. Exporters, such as automobile manufacturers, hotels, and department stores, obtain income from customers outside of the community. This "export income" then enters the local economy in the form of salaries, purchases of materials, dividends, and so forth, and becomes income to residents. Much of it is respent locally; some, however, is spent for goods imported from outside of the community. The dollars respent locally have an economic impact as they continue to circulate through the local economy. This theory applies to arts organizations as well as to other producers.

Studying Economic Impact Using Input-Output Analysis

To derive the most reliable economic impact data, input-output analysis is used to measure the impact of expenditures by nonprofit arts and cultural organizations and their audiences. This is a highly-regarded type of economic analysis that has been the basis for two Nobel Prizes. The models are systems of mathematical equations that combine statistical methods and economic theory in an area of study called econometrics. They trace how many times a dollar is respent within the local economy before it leaks out, and it quantifies the economic impact of each round of spending. This form of economic analysis is well suited for this study because it can be customized specifically to each study region.

To complete the analysis for Collier County, project economists customized an input-output

model based on the local dollar flow among 533 finely detailed industries within the unique economy of Collier County. This was accomplished by using detailed data on employment, incomes, and government revenues provided by the U.S. Department of Commerce (County Business Patterns, the Regional Economic Information System, and the Survey of State and Local Finance), local tax data (sales taxes, property taxes, and miscellaneous local option taxes), as well as the survey data from the responding nonprofit arts and cultural organizations and their audiences.

The Input-Output Process

The input-output model is based on a table of 533 finely detailed industries showing local sales and purchases. The local and state economy of each community is researched so the table can be customized for each community. The basic purchase patterns for local industries are derived from a similar table for the U.S. economy for 2012 (the latest detailed data available from the U.S. Department of Commerce). The table is first reduced to reflect the unique size and industry mix of the local economy, based on data from County Business Patterns and the Regional Economic Information System of the U.S. Department of Commerce. It is then adjusted so that only transactions with local businesses are recorded in the inter-industry part of the table. This technique compares supply and demand and estimates the additional imports or exports required to make total supply equal total demand. The resulting table shows the detailed sales and purchase patterns of the local industries. The 533-industry table is then aggregated to reflect the general activities of 32 industries plus local households, creating a total of 33 industries. To trace changes in the economy, each column is converted to show the direct requirements per dollar of gross output for each sector. This direct-requirements table represents the "recipe" for producing the output of each industry.

The economic impact figures for Arts & Economic Prosperity 5 were computed using what is called an "iterative" procedure. This process uses the sum of a power series to approximate the solution to the economic model. This is what the process looks like in matrix algebra:

$$T = IX + AX + A^2X + A^3X + ... + A^nX$$
.

T is the solution, a column vector of changes in each industry's outputs caused by the changes represented in the column vector X. A is the 33 by 33 directrequirements matrix. This equation is used to trace the direct expenditures attributable to nonprofit arts organizations and their audiences. A multiplier effect table is produced that displays the results of this equation. The total column is T. The initial expenditure to be traced is IX (I is the identity matrix, which is operationally equivalent to the number 1 in ordinary algebra). Round 1 is AX, the result of multiplying the matrix A by the vector X (the outputs required of each supplier to produce the goods and services purchased in the initial change under study). Round 2 is A2X, which is the result of multiplying the matrix A by Round 1 (it answers the same question applied to Round 1: "What are the outputs required of each supplier to produce the goods and services purchased in Round 1 of this chain of events?"). Each of columns 1 through 12 in the multiplier effects table represents one of the elements in the continuing but diminishing chain of expenditures on the right side of the equation. Their sum, T, represents the total production required in the local economy in response to arts activities.

Calculation of the total impact of the nonprofit arts on the outputs of other industries (T) can now be converted to impacts on the final incomes to residents by multiplying the outputs produced by the ratios of household income to output and employment to output. Thus, the employment impact of changes in outputs due to arts expenditures is calculated by multiplying elements in the column of total outputs

by the ratio of employment to output for the 32 industries in the region. Changes in household incomes, local government revenues, and state government revenues due to nonprofit arts expenditures are similarly transformed. The same process is also used to show the direct impact on incomes and revenues associated with the column of direct local expenditures.

A comprehensive description of the methodology used to complete the national study is available at www.AmericansForTheArts.org/EconomicImpact.

"Americans for the Arts' Arts and Economic Prosperity 5 study is an invaluable tool for Guilford County and counties across the nation. The data it has collected and analyzed provide an unparalleled understanding of the influence of the arts on the economy, locally and nationally. It is vital that we continue to measure the impact of the arts on our economy to show our constituents and the nation its value. We are grateful for the work Americans for the Arts does to help us show what an important asset the arts are in the areas of education and health, both physical and mental, and as an economic driver."

Kay Cashion, Commissioner, Guilford County, N.C.
 Chair, National Association of Counties Arts & Culture Commission

Frequently Used Terms

Cultural Tourism

Travel directed toward experiencing the arts, heritage, and special character of a place.

Direct Economic Impact

A measure of the economic effect of the initial expenditure within a community. For example, when the symphony pays its players, each musician's salary, the associated government taxes, and full-time equivalent employment status represent the direct economic impact.

Direct Expenditures

The first round of expenditures in the economic cycle. A paycheck from the symphony to the violin player and a ballet company's purchase of dance shoes are examples of direct expenditures.

Econometrics

The process of using statistical methods and economic theory to develop a system of mathematical equations that measures the flow of dollars between local industries. The input-output model developed for this study is an example of an econometric model.

Econometrician

An economist who designs, builds, and maintains econometric models.

Full-Time Equivalent (FTE) Jobs

A term that describes the total amount of labor employed. Economists measure FTE jobs—not the total number of employees—because it is a more accurate measure of total employment. It is a manager's discretion to hire one full-time employee, two half-time employees, four quarter-time employees, etc. Almost always, more people are affected than are reflected in the number of FTE jobs reported due to the abundance of part-time employment, especially in the nonprofit arts and culture industry.

Indirect and Induced Economic Impact

This study measures the economic impact of the arts using a methodology that enables economists to track how many times a dollar is respent within the local economy, and thus to measure the economic impact generated by each round of spending. When a theater company purchases paint from the local hardware store, there is a measurable economic effect of that initial expenditure within a community. However, the economic benefits typically do not end there, because the hardware store uses some of its income to pay the clerk that sold the paint, as well as to pay its electric bill and to re-stock the shelves. The indirect and induced economic impacts are the effects of the subsequent rounds of spending by businesses and individuals, respectively. (See the example on Page 5 of this report.)

Input-Output Analysis

A system of mathematical equations that combines statistical methods and economic theory in an area of economic study called econometrics. Economists use this model (occasionally called an inter-industry model) to measure how many times a dollar is respent in, or "ripples" through, a community before it "leaks out" of the local economy by being spent non-locally (see Leakage below). The model is based on a matrix that tracks the dollar flow among 533 finely detailed industries in each community. It allows researchers to determine the economic impact of local spending by nonprofit arts and cultural organizations on jobs, household income, and government revenue.

Leakage

The money that community members spend outside of the local economy. This non-local spending has no economic impact within the community. A ballet company purchasing shoes from a non-local manufacturer is an example of leakage. If the shoe company were local, the expenditure would remain within the community and create another round of spending by the shoe company.

Multiplier (often called Economic Activity Multiplier)

An estimate of the number of times that a dollar changes hands within the community before it leaks out of the community (for example, the theater pays the actor, the actor spends money at the grocery store, the grocery store pays its cashier, and so on). This estimate is quantified as one number by which all expenditures are multiplied. For example, if the arts are a \$10 million industry and a multiplier of three is used, then it is estimated that these arts organizations have a total economic impact of \$30 million. The convenience of a multiplier is that it is one simple number; its shortcoming, however, is its reliability. Users rarely note that the multiplier is developed by making gross estimates of the industries within the local economy with no allowance for differences in the characteristics of those industries, usually resulting in an overestimation of the economic impact. In contrast, the input-output model employed in Arts & Economic Prosperity 5 is a type of economic analysis tailored specifically to each community and, as such, provides more reliable and specific economic impact results.

Resident Household Income (often called Personal Income)

The salaries, wages, and entrepreneurial income residents earn and use to pay for food, mortgages, and other living expenses. It is important to note that resident household income is not just salary. When a business receives money, for example, the owner usually takes a percentage of the profit, resulting in income for the owner.

Revenue to Local and State Government

Local and state government revenue is not derived exclusively from income, property, sales, and other taxes. It also includes license fees, utility fees, user fees, and filing fees. Local government revenue includes funds to city and county government, schools, and special districts.

Frequently Asked Questions

How were the 341 participating communities and regions selected?

In 2015, Americans for the Arts published a Call for Participants for communities interested in participating in the Arts & Economic Prosperity 5 study. Of the more than 300 participants that expressed interest, 250 agreed to participate and complete four participation criteria: (1) identify and code the universe of nonprofit arts and cultural organizations in their study region; (2) assist researchers with the collection of detailed financial and attendance data from those organizations; (3) conduct audience-intercept surveys at cultural events; and (4) pay a modest cost-sharing fee (no community was refused participation for an inability to pay). Thirty of the 250 partners included multiple regions as part of their participation (e.g., a county as well as a city located within the county); as a result, the 250 local, regional, and statewide partners represent a total of 341 participating study regions.

How were the eligible nonprofit arts organizations in each community selected?

Local partners attempted to identify their universe of nonprofit arts and cultural organizations using the Urban Institute's National Taxonomy of Exempt Entity (NTEE) codes as a guideline. Eligible organizations included those whose primary purpose is to promote appreciation for and understanding of the visual, performing, folk, and media arts. Government-owned and government-operated cultural facilities and institutions, municipal arts agencies and councils, private community arts organizations, unincorporated arts groups, living collections (such as zoos, aquariums, and botanical gardens), university presenters and cultural facilities, and arts programs that are embedded under the umbrella of a non-arts organization or facility (such as a hospital or church) also were included if they play a substantial role in the cultural life of the community. For-profit businesses and individual artists are excluded from this study.

What type of economic analysis was done to determine the study results?

An input-output economic analysis was customized for each of the participating study regions to determine the economic impact its nonprofit arts and cultural organizations and arts audiences. Americans for the Arts, which conducted the research, worked with highly regarded economists to design the input-output models.

What other information was collected in addition to the arts surveys?

In addition to detailed expenditure data provided by the surveyed organizations and cultural attendees, researchers and economists collected extensive wage, labor, tax, and commerce data provided by the U.S. Department of Commerce (County Business Patterns, the Regional Economic Information System, and the Survey of State and Local Finance), as well as local and state tax data for use in the input-output analyses.

Why doesn't this study use a multiplier?

When many people hear about an economic impact study, they expect the result to be quantified in what is often called a multiplier or an economic activity multiplier. The economic activity multiplier is an estimate of the number of times a dollar changes hands within the community (e.g., a theater pays its actor, the actor spends money at the grocery store, the grocery store pays the cashier, and so on). It is quantified as one number by which expenditures are multiplied. The convenience of the multiplier is that it is one simple number. Users rarely note, however, that the multiplier is developed by making gross estimates of the industries within the local economy

and does not allow for differences in the characteristics of those industries. Using an economic activity multiplier usually results in an overestimation of the economic impact and therefore lacks reliability.

Why are the admissions expenses excluded from the analysis of audience spending?

Researchers assume that any admissions dollars paid by event attendees are typically collected as revenue for the organization that is presenting the event. The organization then spends those dollars. The admissions paid by audiences are excluded because those dollars are captured in the operating budgets of the participating nonprofit arts and cultural organizations. This methodology avoids "double-counting" those dollars in the analysis.

How is the economic impact of arts and culture organizations different from other industries?

Any time money changes hands there is a measurable economic impact. Social service organizations, libraries, and all entities that spend money have an economic impact. What makes the economic impact of arts and culture organizations unique is that, unlike most other industries, they induce large amounts of related spending by their audiences. For example, when patrons attend a performing arts event, they may purchase dinner at a restaurant, eat dessert after the show, and return home and pay the baby-sitter. These expenditures have a positive and measurable impact on the economy.

Will my local legislators believe these results?

Yes, this study makes a strong argument to legislators, but you may need to provide them with some extra help. It will be up to the user of this report to educate the public about economic impact studies in general and the results of this study in particular. The user may need to explain (1) the study methodology used; (2) that economists created an input-output model for each community and region in the study; and (3) the difference between input-output analysis and a multiplier. The good news is that as the number of economic impact studies completed by arts organizations and other special interest areas increases, so does the sophistication of community leaders whose influence these studies are meant to affect. Today, most decision makers want to know what methodology is being used and how and where the data were gathered.

You can be confident that the input-output analysis used in this study is a highly-regarded model in the field of economics (the basis of two Nobel Prizes in economics). However, as in any professional field, there is disagreement about procedures, jargon, and the best way to determine results. Ask 12 artists to define art and you may get 12 answers; expect the same of economists. You may meet an economist who believes that these studies should be done differently (for example, a cost-benefit analysis of the arts).

How can a community not participating in the Arts and Economic Prosperity 5 study apply these results?

Because of the variety of communities studied and the rigor with which the Arts & Economic Prosperity 5 study was conducted, nonprofit arts and cultural organizations located in communities that were not part of the study can estimate their local economic impact. Estimates can be derived by using the Arts & Economic Prosperity 5 Calculator (found at www.AmericansForTheArts.org/EconomicImpact). Additionally, users will find sample PowerPoint presentations, press releases, Op-Ed, and other strategies for proper application of their estimated economic impact data.

Acknowledgments

Americans for the Arts expresses its gratitude to the many people and organizations who made *Arts & Economic Prosperity 5: The Economic Impact of Nonprofit Arts and Cultural Organizations and Their Audiences in Collier County* possible and assisted in its development, coordination, and production. A study of this size cannot be completed without the collaboration of many partnering organizations.

Generous funding for this project was provided by the United Arts Council of Collier County, which also served as the local project partner and as such was responsible for the local implentation and data collection requirements of this customized analysis for Collier County.

Special thanks to the John D. and Catherine T. MacArthur Foundation, the Barr Foundation, and The Ruth Lilly Fund of Americans for the Arts for their financial support of the national implementation of Arts & Economic Prosperity 5.

Finally, each of our 250 local, regional, and statewide research partners contributed time and/or financial support toward the completion of this national study. We thank each and every one of them for committing the time and resources necessary to achieve success. A study of this magnitude is a total organizational effort; appreciation is extended to the entire board and staff of Americans for the Arts. The research department responsible for producing this study includes Randy Cohen, Ben Davidson, Isaac Fitzsimons, and Graciela Kahn.

Collier County's Participating Nonprofit Arts and Cultural Organizations

This study could not have been completed without the cooperation of the 45 nonprofit arts and cultural organizations in Collier County, listed below, that provided detailed financial and event attendance information about their organization.

Art League Of Marco Island D/B/A/Marco Island Center For The Arts; Artis—Naples; Arts Naples World Festival; Audubon of the Western Everglades; Bach Ensemble; Bayshore Cultural And Performing Arts Center Inc Dba Capa Cultural And Performing Arts Center; Big Cypress Chapter National Society Of The Daughters Of The American Revolution (Big Cypress Chapter); Classic Chamber Concerts; Collier Child Care Resources (Lunch-Art-Auction); Collier County Agricultral Fair & Exposition; Collier County Public Schools Adult And Community Education; CommUNITY Gallery - Collier County Sheriff's Office; Conservancy of Southwest Florida; Everglades Society For Historical Preservation; First Baptist Church Of Naples (Naples Christmas Spectacular); Friends Of Delnor-Wiggins Pass State Park (Wildlife & Wildlands Art Show); Golisano Children's Museum of Naples; Goodland Arts Alliance; Gulf Coast Big Band Inc; Gulfshore Opera; Gulfshore Playhouse; Holocaust Museum & Ed. Center of SW FL; Inish/Trinity; Island Theater Company; Marco Island Historical Society; Marine Industries Association of CC; Naples Art Association; Naples Ballet; Naples Botanical Garden Inc; Naples Concert Band Inc; Naples Italian American Foundation; Naples Jazz Society; Naples Music Club; Naples Orchestra & Chorus (I Musici Di Napoli Inc); Naples Players Inc; Naples Quilters Guild Inc; Naples Zoo Inc; National Society Of Tole & Decorative Painters Inc (Naples Decorative Artists); Opera Naples; Shakespeare In Performance; Swamp Buggy; Swfl Veterans Alliance Inc; Theatrezone; United Arts Council Of Collier County Inc; and West Coast Muscle Car Club.

Collier County's Participating Cultural Event Attendees

Additionally, this study could not have been completed without the cooperation of the 748 arts and cultural audience members who generously took the time to complete the audience-intercept survey while attending a performance, event, or exhibit within Collier County during calendar year 2016.

AMERICANS FOR THE ARTS IS THE NATION'S LEADING NONPROFIT ORGANIZATION FOR ADVANCING THE ARTS IN AMERICA. ESTABLISHED IN 1960, WE ARE DEDICATED TO REPRESENTING AND SERVING LOCAL COMMUNITIES AND CREATING OPPORTUNITIES FOR EVERY AMERICAN TO PARTICIPATE IN AND APPRECIATE ALL FORMS OF THE ARTS.

The following national organizations partner with Americans for the Arts to help public- and private-sector leaders understand the economic and social benefits that the arts bring to their communities, states, and the nation.

Cultural Assets Inventory

Collier County is home to abundant, diverse cultural assets – organizations, venues, places, natural and cultural heritage, and people. The cultural asset list, to date, is a combination of assets identified by Collier residents (during the community engagement phase and through the survey), County and UAC staff suggestions, IRS nonprofit lists, the *Collier County Guide to Historic Sites*, and other sources. Currently, there are 160 cultural assets on the list. The work of arts and culture asset identification is never complete. This list of information and assets is a living list – to be revised and updated as necessary. Provided in the appendix of this plan is the list of cultural assets identified for this plan.

Cultural asset identification plays a vital role in elevating arts, culture, and the heritage of a place, which embodies community identity, quality of life, and economic vitality. It is a crucial step in integrating culture within County decision-making and strengthening the cultural sector. For this plan, the intent of identifying Collier's cultural assets is to:

- Raise awareness of community cultural assets with residents, visitors, and tourists
- Identify strengths, gaps, needs, and opportunities in the arts and cultural sector
- Provide data necessary for better informed planning and policy decisions
- Provide information for economic development and to promote arts and cultural resources

Cultural Asset Categories

Nonprofit Community Cultural Organizations

This category includes organizations that represent arts, heritage, and cultural interests in the community. These are nonprofits essential to the cultural vitality of the community such as arts organizations, civic and social organizations, cultural organizations, and heritage groups. There are approximately 63 nonprofit community cultural organizations in the county, including five with operating budgets greater than \$1 million.

Cultural Facilities/Venues, Spaces and Places

This category represents facilities, spaces, and sites where cultural activities take place. These can include spaces in the public, private, and nonprofit sectors, and include purpose-built facilities as well as facilities that offer space for cultural programming. There are numerous cultural assets in Collier County in this category including theaters, galleries, museums, art centers, farmers' markets, dance studios, and a culinary accelerator. There are natural creative areas in the County, including the design and art districts and places around the county.

Cultural Events and Festivals

This category represents recurring cultural activities. Festivals and events contribute to the animation of public and natural spaces by bringing entertainment, new experiences, and economic impacts to the community. These can include performing arts events, tours of culturally significant places, seasonal celebrations, and many others. Assets may consist of festivals and events, artists or artisan tours and activities, film festivals and events, multicultural festivals and events, art gallery tours and experiences, performing arts festivals and events, seasonal celebrations and events, and street festivals. Cultural events are broad and diverse in the county, including performances, exhibits and festivals, heritage events, and more.

Parks, Natural Heritage, Cultural Heritage

This category represents significant natural areas in the community, such as beaches, parks, botanical and community gardens, and conservation areas that offer rich cultural, recreational, and community experiences. This category also represents significant cultural heritage sites or resources. It includes buildings and places of historical, cultural and educational value, and archive collections that help pay tribute to the community's past. There are 16 parks throughout the County and 42 historic sites identified through this process. Collier County values its history and has an active preservation practice. The sites include historic buildings, churches, cemeteries, trails, and markers.

SUMMARY CULTURAL ASSET INVENTORY LIST*

160 total of cultural assets in Collier County Identified by the community and major data sources

63 nonprofit arts and cultural organizations

42 historic sites

25 recurring events, festivals, and programs

16 parks, beaches, environmental organizations and places

14 cultural places, such as arts districts, libraries and community centers

Many more arts businesses (e.g., galleries), arts people and creative professionals

^{*} List is fluid - should be updated as needed.

Performing Arts Venues Comparison Study

Overview

A review of the availability of Collier County performing arts venues benchmarked to three Florida counties – Lee, Sarasota and Palm Beach – reveals useful comparisons and provides new information to inform decision-making about future cultural facilities. ¹⁰ Performing arts venues are significant because they play a key role in providing amenities for residents and visitors, and support strategies to expand cultural tourism. They also provide places for arts education, youth development, and community arts programming.

Performing arts venues included in this review are theaters, auditoriums, studio/black box theaters, and cabarets. They span a range of sizes from less than 100 seats to more than 2,000. The review tallies the total number of venues, their seating capacity, and configuration. Larger venues are those with more than 1,000 seats. Excluded are outdoor amphitheaters, arenas, churches, and night clubs.

Observations

The review indicates Collier County, with a total of 14 venues, has fewer performing arts venues than the benchmark counties, which have between 20 and 30 venues. To place this in context, Collier's population is smaller than the other counties and, compared to population, Collier's total number of available seats per person in performing arts venues is slightly more than Lee and Palm Beach Counties and about half that of Sarasota County. Collier has one large venue, Artis-Naples' Hayes Hall, while the other counties have between two and four large venues and many smaller community venues throughout the county.

Since Collier's venues are concentrated in Naples, community access to performing arts venues is limited by their location. Accessibility diminishes with distance from the venue, so this means that residents beyond a 10- or 20-minute drive time of these facilities are increasingly less likely to attend. This barrier is more pronounced for youth access since arts education programs depend on parents or others to provide transportation.

Compared to its population, Collier's total number of available seats per person in performing arts venues is about half that of Sarasota County, but on a par with Lee and Palm Beach Counties.

¹⁰ The review includes the total number of available seats, venues, and large venues, and are compared with measures of market demand for performing arts, and with current and future projected population figures. Comparison counties were selected because they are tourism competitors to Collier and promote themselves as art and cultural destinations.

Market demand for arts performances in Collier County is strong and can support additional venues, now and in the future. Collier County's population is projected to grow by approximately 35% between 2020 and 2045. Population growth will almost certainly increase the market demand for performing arts venues and programs. Current market demand is very high (above the national average) for 19% of the region's most densely populated block groups, both in the immediate area of Naples and within a few hours' drive. Within a one-hour drive of Naples, there are an estimated 123,000 performing arts buyers and another 173,000 buyers for commercial concerts. Based on population projections, the 35% increase in buyers within a 30-minute drive of Naples (encompassing most of the Collier County) would estimate buyer potential within the county for arts and commercial performances at over 150,000 persons.

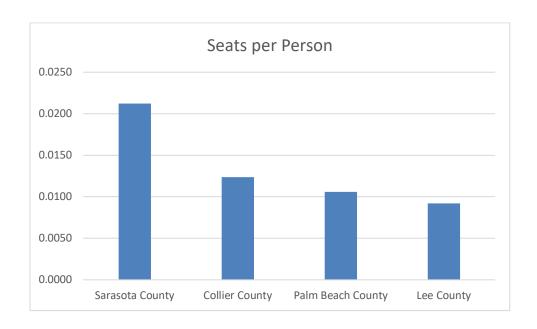

Conclusion

Collier County has lower availability of performing arts venues than the benchmark counties, in terms of their total number and size, but the comparison is more favorable when adjusted for population. More significant is that there is a location and access issue, since Collier's venues are almost all concentrated in Naples and most population growth is projected in the eastern portions of the County. This finding corroborates facility needs identified through the survey of nonprofit arts and cultural organizations conducted for this plan. It corroborates issues of geographic access heard from residents outside of Naples. These observations, combined with strong present and future market demand, illustrate an opportunity to provide or facilitate the development of additional venues, including large venues, to meet identified facility needs, and to provide greater community access. Building new facilities is not the only strategy, however, for meeting the cultural needs of a growing community. Sharing of existing facilities and addressing transportation barriers are examples of other approaches. While this study does not test the feasibility of any specific facility project, it is clear that Collier's facility needs include community-based venues in locations throughout the county, ones that are more accessible in terms of location, pricing and programming. Developing additional venues can also increase the desirability of Collier County as a cultural destination. While any specific facility project must undergo rigorous feasibility analysis, there is potential current and projected future market demand to support more venues.
